Preface

The **Physical Education and Sport Teaching Module** for **Form 1** has been developed in response to the introduction of the **Competence-Based Curriculum (CBC)**, a transformative initiative aimed at enhancing quality education and relevance.

This teaching module is designed to support teachers to effectively deliver Physical Education and Sport lessons under the new curriculum. Its primary objectives are to, bridge the gap created by the absence of approved textbooks and equip teachers with practical skills and assessments tailored to learners' needs and levels.

The Ministry of Education acknowledges the challenges associated with transitioning to a new curriculum. Consequently, this module reflects our commitment to providing teachers with structured guidance, suggested activities, formative and summative assessments aligned with the CBC's objectives.

While this module serves as a foundational resource, we encourage teachers to supplement it with their own research and innovations to address potential gaps during implementation. The suggested activities and assessments are designed to foster practical and critical thinking skills in learners, ensuring relevance and adaptability across diverse school contexts.

Teachers are encouraged to tailor these suggestions to their unique classroom dynamics and explore alternative approaches when necessary. We hope this module will empower teachers to navigate the new competence-based curriculum with confidence, inspiring and equipping learners with applied knowledge, skills, and values.

Kelvin Mambwe (PhD)
Permanent Secretary- Educational Services
MINISTRY OF EDUCATION

Acknowledgement

The **Physical Education and Sport Teaching Module for Form 1** is the culmination of a collaborative and inclusive development process. Sincere appreciation is extended to the numerous individuals, institutions, and organisations that contributed to the teaching module's development.

I am grateful for the technical support provided by teachers, Lecturers from Colleges of Education and Universities, Subject Associations, Civil Society Organisations and Cooperating Partners. Their invaluable input and expertise have enriched the content and quality of this teaching module.

I also acknowledge the dedication and hard work of the staff at the Curriculum Development Centre, whose tireless efforts ensured the successful completion of the teaching module development process.

Charles Ndakala (Dr.)

INTRODUCTION

The Competence-Based Curriculum (CBC) is designed to equip learners with competences necessary to navigate the complexities of the modern world. This Physical Education and Sport (PES) teaching module is tailored to support teachers in implementing the CBC, focusing on the attainment of specific competences of specified sub-topics as indicated in the syllabus, but aligned to the general competences like creativity and innovation, critical thinking, problem-solving, and effective communication.

Each specific competence is supported by carefully designed learning activities that cater for diverse learning styles and abilities. These learning activities further give guidance on how they should be effectively administered to the learners to meet the expected standards that speak to the specific competences. Furthermore, this module encourages teachers to assess learner progress using a range of strategies.

By using this PES teaching module, teachers will be able to support learners to acquire competences outlined in the syllabus. In turn, learners will develop practical skills and enhancement of talents, creativity, self-expression and a sense of aesthetics.

TOPIC: 1.5 FITNESS ACTIVITIES

INTRODUCTION

Fitness goes beyond physical abilities like sit-ups or running. It's about the body's systems working efficiently to meet every day's demands and adapt to stress. Fitness connects closely to developing overall well-being. It includes physical, social, emotional, spiritual, and mental aspects that enable a learner to participate in various activities and sports effectively. Health and fitness are intertwined, emphasizing the importance of being fit enough to handle life's challenges, whether academic or athletic. This perspective teaches learners that total fitness contributes to success in both sports and daily life.

World over, Zambia inclusive, activities such as aerobics, jogging and marathons demonstrate a growing emphasis on health and fitness. However, the prevalence of sedentary lifestyles and extended leisure time has led to health problems like heart disease, obesity and some cancers, while also negatively impacting fitness levels.

This unit introduces the learners to the fundamental concepts and practices of fitness activities in Physical Education and Sport. Learners will understand and explore the importance of health related components, Isotonic and isometric activities. It will further explore various forms of exercise, ranging from heart-pumping cardiovascular workouts to muscle-building strength training activities.

Learners should acquire the following general competencies:

Communication: Ability to follow instructions, provide feedback, and communicate with peers during fitness activities.

Critical thinking: Ability to evaluate the effectiveness of different fitness activities, consider safety guidelines, and make informed decisions about one's own fitness.

Problem-solving: Ability to adapt to new fitness activities, overcome challenges, and find solutions to problems that arise during participation.

Emotional intelligence: Ability to take responsibility for one's own fitness, set goals, and monitor progress.

Teamwork: Ability to work collaboratively with peers during fitness activities, promoting mutual support and encouragement.

HOOK

What role do you think fitness activities play in maintaining a healthy lifestyle and how can you incorporate Physical Education into your daily routine?

TERMINOLOGY

Aerobic exercise: Physical activity that raises the heart rate and improves cardiovascular health.

Body Composition: The proportion of body fat to lean body mass.

Cardiovascular Endurance: The ability of the heart, lungs, and blood vessels to supply oxygen

to the muscles during prolonged physical activity.

Dynamic Movement: Movement that involves the contraction and relaxation of muscles to move the joints.

Fitness: The ability to perform physical activity with efficiency and effectiveness.

Flexibility exercise: Physical activities designed to improve the range of motion of muscles and joints.

Flexibility: The range of motion in joints and muscles.

Isometric Contraction: occurs when a muscle generates force without changing its length resulting in no movement at a joint.

Isotonic Contraction: occurs if a muscle changes length while generating force resulting in movement at a joint.

Concentric contraction: The muscle shortens as it contracts (e.g., lifting a weight).

Eccentric contraction: The muscle lengthens as it contracts (e.g., lowering a weight).

Muscle Contraction: The process by which muscles generate force to move the joints.

Muscular Endurance: The ability of muscles to sustain activity over time.

Muscular Strength: The ability of muscles to exert force against resistance.

Strength training: Physical activity that improves muscular strength and endurance.

Warm-up: A variety of simple activities that are designed to prepare the body for either moderate or complex activities.

Sub-Topic 1.5.1 Health-Related Components of Fitness

Introduction

This subtopic focuses on the five health-related components of fitness that are essential for maintaining overall physical well-being. These components are Cardiovascular Endurance, Muscular Strength, Muscular Endurance, Flexibility and Body Composition. Learners need to realise the importance of each health-related component. They should be able to identify exercises and activities that improve each component and also recognise the benefits of regular physical activity on overall health and well-being.

Specific Competence(s):

1.5.1.1 Perform health related activities

TIP

The lesson on health related fitness may be conducted in the classroom. The teacher can also teach the learners from any of the environments such as Natural (playing grounds...), Artificial (Modified classroom...) and Technological (video clips, shows...).

Teaching material/Resources

Stop watch or mobile phone timer, low bench, meter rule or measuring tape, yoga mat, chalk or marker, string, (*local materials such as bricks, plastic bottles, old tires, ropes...*)...

❑ Learning Activity:

- Identifying health-related activities (*Endurance, body composition. Flexibility, muscular strength...*).

DISCUSSION

Learners should:

Task 1;

In groups identify and discuss health related fitness activities.

CONTENT TIP

- ❑ Health Related Fitness refer to the aspects of physical fitness that is directly related to an individual's overall health and well-being.
- ❑ An athlete should maintain good health to perform activities with ease and still have sufficient energy to handle forth coming activities.

Components of Health-Related Fitness

1. **Cardiovascular Endurance:** The ability of the heart, lungs, and blood vessels to supply oxygen to the muscles during sustained physical activity.
2. **Muscular Strength:** The ability of muscles to generate force against resistance.
3. **Muscular Endurance:** The ability of muscles to sustain activity over time.
4. **Flexibility:** The range of motion in joints and muscles.
5. **Body Composition:** The proportion of body fat to lean body mass.

TIP

S/N	COMPONENTS	ACTIVITIES TO DEVELOP THE COMPONENT
1	Cardiovascular Endurance	Walking, jogging, aerobics, Sprint-jog-sprint, shuttle runs, swimming, cycling ...
2	Muscular strength	Lifting, pushing, tag of war, arm curls...
3	Muscular endurance	Running, swimming, jogging, sit ups, pushups...
4	Flexibility	Sit and reach, back extension, body sideways...
5	Body Composition	Walking, running, jogging, cycling, skipping, sit ups...

The teacher to consider the table above to help learners identify physical activities that can improve Health-Related Fitness during practical activities.

Learning activity

- ❑ Discussing the benefits of health-related activities. (*Physical Health, mental and emotional health, health promotion and disease prevention...*)

Learners Should:

Task 1

In groups, discuss the benefits of health-related activities.

(*Physical Health, mental and emotional health, disease prevention...*)

CONTENT TIP

Below are some of the advantages of engaging in regular health-related activities:

Physical Health

- ❑ Improved Cardiovascular Health: Regular activities like walking, running, and cycling strengthen the heart, improve blood circulation, and lower the risk of heart diseases.
- ❑ Enhanced Strength and Endurance: Strength training exercises build muscle mass, improve endurance, and enable the body to handle physical demands more effectively.
- ❑ Better Weight Management: Physical activities help burn calories, maintain a healthy weight, and reduce the risk of obesity-related conditions like diabetes.
- ❑ Increased Flexibility and Balance: Exercises such as yoga and stretching improve flexibility, coordination, and balance, which are essential for preventing injuries and falls.
- ❑ Boosted Immune System: Moderate physical activity helps strengthen the immune system, making the body more resilient to illnesses.
- ❑ Improved Mental Health: While primarily physical, activities also release endorphins that reduce stress, anxiety, and depression.
- ❑ Enhanced Bone and Joint Health: Weight-bearing exercises strengthen bones and joints, reducing the risk of osteoporosis and arthritis as one ages.
- ❑ Higher Energy Levels: Engaging in regular exercise increases energy and stamina, making it easier to tackle daily tasks.

Mental and Emotional Benefits

- ❑ Reduced Stress and Anxiety: Physical activity releases endorphins, which help alleviate stress and anxiety.
- ❑ Improved Mood: Regular exercise has been shown to reduce symptoms of depression and improve overall mental well-being.
- ❑ Enhanced Cognitive Function: Physical activity improves blood flow to the brain, boosting cognitive function and reducing the risk of age-related cognitive decline.
- ❑ Better Sleep: Regular exercise helps regulate sleep patterns, leading to improved sleep quality and duration.

Health promotion:

- ☐ Encourages a Healthy Lifestyle: Regular physical activity motivates individuals to adopt other beneficial habits, such as balanced eating, proper hydration, and stress management.
- ☐ Improves Overall Well-being: Engaging in health-related activities promotes physical, mental, and emotional well-being, fostering a more balanced and fulfilling life.
- ☐ Prevents Chronic Illnesses: Physical activities reduce the risk of conditions like heart disease, diabetes, and hypertension by improving bodily functions and maintaining healthy weight.
- ☐ Supports Community Health: Participation in group activities, sports, or community wellness programs promotes social interactions and collective health awareness.
- ☐ Strengthens Mental Resilience: Exercise helps combat stress, anxiety, and depression, fostering a healthier mental state to cope with life's challenges.
- ☐ Boosts Productivity and Energy: Active individuals are more likely to be energized and productive, both at work and in personal endeavors.
- ☐ Strengthens Mental Resilience: Exercise helps combat stress, anxiety, and depression, fostering a healthier mental state to cope with life's challenges.

Disease prevention:

- ☐ Lower Risk of Chronic Illnesses: Regular physical activity reduces the chances of developing conditions such as heart disease, Type 2 diabetes, and hypertension by improving heart health, blood sugar regulation, and overall body function.
- ☐ Strengthened Immune System: Moderate exercise boosts the immune system, helping the body defend against infections and illnesses more effectively.
- ☐ Healthy Weight Management: Maintaining a healthy weight through exercise decreases the risk of obesity-related diseases like diabetes and certain types of cancer.
- ☐ Improved Mental Health: Activities such as yoga or walking alleviate stress and reduce the likelihood of stress-related disorders, including depression and anxiety.
- ☐ Enhanced Bone and Joint Health: Regular movement strengthens bones and joints, reducing the risk of osteoporosis and arthritis.
- ☐ Prevention of Respiratory Problems: Aerobic exercises improve lung capacity and respiratory function, lowering the risk of chronic respiratory diseases.
- ☐ Social Benefits
- ☐ Social Connections: Engaging in group fitness activities or sports can help build social connections and reduce feelings of loneliness.
- ☐ Teamwork and Communication: Team sports and activities promote teamwork, communication, and problem-solving skills.
- ☐ Community Engagement: Participating in local fitness events or sports teams can help individuals connect with their community and build a sense of belonging.

TIP

The teacher can include other benefits and explain to the learners so that they can have enough knowledge.

➤ Learning activity

- Performing various health related activities. (*Endurance, body composition, flexibility, strength...*). (*Jogging, tag of war, stretching Routine...*).

Learners Should:

Task 1

Perform various health related activities. (*Endurance, body composition, flexibility, strength...*). (*Jogging, tag of war, stretching Routine...*).

The following are some of the activities that are designed to measure fitness...

ACTIVITY:

Step 1: Two tests are used to measure **cardiovascular endurance**:

1. The Cooper 12-minute run test

- This test involves running as fast as possible in 12 minutes. The further you can run, the higher your level of cardiovascular endurance.
- The teacher can let the learners run around the running track for 12 minutes and observe how many laps each covered in that given time.

TIP

The teacher may make adjustments to the standard schedule while still ensuring successful competence).

2. Kasch-Boyer step test

The step test is a simple test requiring a bench or chair 30cm high.

- You step on the bench with both feet and step down again at a pace of once every two seconds for three minutes.
- Five seconds after the exercise, your pulse rate is taken for one minute. The lower your pulse rate, the higher the level of your cardiovascular endurance.

**TIP**

Learners to perform according to their abilities and guided by the teacher

Step 2: Flexibility can be assessed through;

Sit and Reach test

- The sit and reach test measures your ability to stretch the muscles of the lower back and the back of the legs (hamstrings).
- Sit on the floor with legs straight and feet flat against a base. Reach as far as possible towards your toes and hold for three seconds.

**Arm and Shoulder reach**

- This exercise measures your ability to stretch the muscles of the shoulders.
- Lie face down on the floor with arms straight.
- Hold a stick with your hands shoulder width apart, raise your arms as high as possible and hold for 3 seconds.
- Keep your chin on the floor during the stretch.

Arm and shoulder reach.

Trunk extension test

- This test measures your ability to stretch the muscles of your upper back.
- Lie face down on the floor, put your hands behind your head and raise your head and shoulders as high as possible holding for 3 seconds.

Trunk extension test.

Expected standards

Health related activities performed correctly.

Sub-Topic: 1.5.2 Isotonic activities

Introduction:

Isotonic activities are a type of exercise that involves muscle contractions and movements, where the muscle length and tension change simultaneously. In other words, isotonic activities require the muscles to contract and move the joints through a range of motion, while maintaining constant tension. Examples of isotonic exercises include weightlifting, resistance band, exercises, bodyweight exercises like push-ups and squats.

Learners will be able to describe the characteristics, benefits and safety guidelines of isotonic activities and be able to perform various exercises during the practical lessons.

Specific Competence(s)

1.5.2.1 Demonstrate isotonic activities.

CONTENT TIP

This lesson will be taught in a natural environment (playing grounds...). The teacher can also teach the learners from any of the environments such as Artificial (Modified classroom...) and Technological (video clips...)

Teaching materials/ resources

Resistant bands or light weights, yoga mats, dumb bells, medicine balls, benches, (Local materials water bottles/ small bags filled with sand/beans, ropes...).

➤ Learning Activities:

- Describing the characteristics of isotonic activities. (*Muscle contraction, joint movement, constant tension, dynamic movement*)

DISCUSSION

Learners should:

Task 1

Describe the characteristics of isotonic activities (*Muscle contraction, joint movement, constant tension, dynamic movement*).

CONTENT TIP

Muscle Contraction

- Isotonic activities involve the contraction of muscles, which generates force to move the joints.

Movement

- Isotonic activities require movement of the joints, which involves the lengthening and shortening of muscles.

Constant Tension

- Isotonic activities maintain constant tension in the muscles throughout the range of motion.

Dynamic movement

- Isotonic activities also involve exercises that deal with active, controlled motion through a full range of joint movement with muscles contracting and lengthening against resistance

➤ Learning activity

- Explaining the benefits of isotonic activities. (*Reduce stress, better body posture, increased muscle strength...*).

Learners should

Task 1

Explain the benefits of isotonic activities individually and in small groups.

CONTENT TIP

Improved muscular strength and endurance

- Isotonic exercises help build muscular strength and endurance by challenging muscles to work against resistance

Improved joint mobility and flexibility

- Isotonic exercises can help improve joint mobility and flexibility by increasing range of motion and reducing stiffness.

Improved Body Composition

- Isotonic exercises can help reduce body fat percentage and increase lean muscle mass, leading to improved body composition.

Improved Mental Health and Mood

- Isotonic exercises can release endorphins, also known as “feel-good” hormones, which can help improve mental health and mood.

Better Sleep Quality

- Regular isotonic exercise can help improve sleep quality and duration by reducing stress and anxiety.

TIP

Teacher should explain other benefits for the learners to comprehend.

➤ Learning activity

- Performing various isotonic exercises. (*Walking, climbing stairs, Push-up...*).

Learners should

Task 1

Perform various isotonic exercises in smaller groups

CONTENT TIP

The teacher should be able to demonstrate and allow learners to perform different isotonic exercises.

- Push-ups are an example of an isotonic exercise, as they involve muscle contraction, movement and constant tension throughout the range of motion.
- Biceps/dumbbell/arm) curls are also examples of isotonic exercises, as they involve muscle contraction, movement and constant tension throughout the range of motion.

TIP

The teacher can include other isotonic activities for the learners to perform.

Sub-Topic 1.5.3 Isometric Activities.

Introduction:

Isometric activities, also known as isometric exercises or isometrics, are a type of physical activity where the muscles contract and generate force without moving the joints. In other words, the muscle length and joint angle remain constant, while the muscle tension changes.

Isometric activities involve the static contraction of muscles, where the muscle fibers shorten and then maintain a constant length. This type of contraction helps to improve muscular strength, endurance, and tone.

Learners will explore the fundamentals of isometric activities, understanding the benefits, types and applications in Physical Education. Through a combination of theoretical and practical lessons, learners will develop their knowledge, skills and appreciation for isometric exercises.

Specific Competence(s)

1.5.3.1 Perform isometric activities.

CONTENT TIP

The lesson will be conducted in a natural environment (playing grounds...). The teacher can also teach the learners from any of the environments such as Artificial (Modified classroom...) and Technological (video clips, shows...)

Teaching material/resources:

Resistance bands, light weights, dumb bells, exercise balls, yoga mats, hand grips or stress balls. (Local materials; plastic bottles, ropes...)...

➤ Learning Activity:

- Describing the characteristics of isometric activities. (*Muscle contraction, no joint movement, constant tension, static movement*)

DISCUSSION

Learners should:

Task 1

Describe the characteristics of isometric activities in pairs and as a class.

CONTENT TIP

No Joint Movement

- In isometric activities, “no joint movement” refers to the fact that the joints do not move or change position during the exercise. The joint angle remains constant, and there is no visible movement of the joint.
- Isometric activities involve no movement of the joints. The joints remain static and the muscles contract without changing the joint angle.

Muscle Contraction

- Isometric activities involve the contraction of muscles. The muscle fibers shorten and then maintain a constant length.

Constant Muscle Length

- During isometric activities, the muscle length remains constant. The muscles contract, but the length of the muscle does not change.

Increased Muscle Tension

- Isometric activities involve an increase in muscle tension. The muscles contract and

generate force, which increases muscle tension.

Static Contraction

- ☐ Isometric activities involve static contractions, where the muscle contracts and then holds the contraction for a period.

➤ Learning activity

- ☐ Explaining the benefits of isometric activities. (*Injury rehabilitation, muscle endurance...*).

Learners should

Task 2

In groups explain the benefits of isometric activities. (*Injury rehabilitation, muscle endurance...*).

CONTENT TIP

Isometric exercises, offer numerous benefits for the body and mind. Some of the advantages of incorporating isometric activities into your fitness routine:

Increased Strength:

- Isometric exercises help build strength without moving your joints, which can be especially beneficial for people with joint problems or injuries.

Improved Muscle Endurance:

- Isometric activities enhance muscle endurance, allowing you to sustain contractions for longer periods.

Injury Rehabilitation:

- Isometric exercises are often used in physical therapy to help recover injuries, especially those affecting the joints.

CONTENT TIP

Teacher should go in details to give more benefits of isometric activities and allow learners to debate.

➤ Learning activity

- Performing various isometric activities. (Pushing the wall, crouch position, scrum...)

Learners should

Task 1

ACTIVITY:

Perform various isometric exercises during a practical lesson:

**TIP**

The teacher should be able to demonstrate and allow learners to perform different isometric exercises.

**CONTENT TIP****Pushing the wall:**

- This combination of muscle contraction without joint movement makes pushing the wall an isometric activity. It's an effective way to build strength, endurance, and muscle tone, especially in the upper body. **Wall Sit:**
- The knee joint remains at a 90-degree angle, and there is no visible movement of the joint.

Plank:

- The elbow joint remains at a 90-degree angle, and there is no visible movement of the joint.

Glute Bridge:

- The hip joint remains static, and there is no visible movement of the joint.

Expected Standard

Isometric activities performed correctly.

**ASSESSMENT CRITERIA**

1. Multiple-choice quizzes
 - Accuracy (correct selection of answers).
 - time management (complete tasks within the given time)
 - understanding of concepts (reflecting knowledge of concepts)
2. Short-answer questions
 - Relevance (answers directly addressing the question)
 - Completeness (include all necessary points and explanations)
 - Accuracy (correct information and use of terminologies.)
3. Essay questions
 - Content and relevance (address the topic with accurate and relevant details)
 - Organization (clear introduction, body and conclusion)
 - Depth of analysis (shows critical thinking and understanding)
 - Examples and support (includes appropriate example and evidence)
 - Language and mechanics (grammar, punctuation, spelling and expression.)
4. Group project, Research and Field trip reports

- Collaboration and contribution (equal participation, teamwork and communication.)
 - Creativity and initiative (original ideas and thoughtful presentations.)
 - Presentation, if oral (clear, confident and well-coordinated)
5. Class participation and engagement (Debates)
- Preparation (demonstrate research and readiness)
 - Active participation (engaged, contributes meaningfully)
 - Critical thinking (presents logical and relevant arguments)
 - Communication skills (speak clearly, listens actively)
 - Respect and collaboration (maintains respectful dialogues and good teamwork.)
6. Practical
- Skill execution (performs task with correct technique and form)
 - Application of theory (shows understanding of rules)
 - Safety and discipline (follows instructions and uses equipment safely)
 - Participation and effort (actively involved and shows enthusiasm)
 - Progress or improvement (demonstrates learning overtime.)

SUMMARY

- ☐ Fitness involves physical activities and exercises that enhance and maintain overall health and well-being. It encompasses various aspects such as cardiovascular endurance, muscular strength, flexibility, and body composition.
- ☐ Isotonic Activities are exercises that involve a constant amount of muscle tension and movement. During isotonic exercises, muscles change length as they contract and move through a range of motion.
- ☐ Isometric Activities are exercises where muscles generate force without changing length. In these activities, the muscle tension increases without any visible movement.
- ☐ Incorporating both isotonic and isometric exercises into a fitness routine can help improve overall strength, endurance, and muscle definition. Isotonic activities are great for building muscle and improving cardiovascular health, while isometric activities are effective for strengthening specific muscle groups and increasing muscular endurance. Together, they create a well-rounded approach to fitness.

TOPIC: 6 GYMNASTICS

INTRODUCTION

Gymnastics are sports involving the performance of exercises requiring strength, flexibility, balance, coordination, agility endurance and control. The activities form an important part in Physical Education and make a significant contribution to the set goals.

Gymnastics involves systematic and rhythmic exercises on the floor (ground), bars and apparatus. They define activities which arise when a performer strives to test his/her ability to control the body movement. The performance of gymnastics skills is very subjective because it is practical without the use of any designed measurement. The results will therefore entirely depend upon human judgment and interpretation.

General Competences

Learners should acquire the following general competencies:

Analytical thinking: Ability to observe, navigate, analyze, design, judge and depict objects either natural or artificial.

Emotional intelligence: Ability to demonstrate sports etiquette, express self-awareness, self-management and build relationships with others.

Communication: Ability to effectively convey ideas, thoughts, and information through verbal and non-verbal means.

Critical Thinking: Capacity to analyze information, evaluate evidence, and form informed opinions and decisions.

Problem-Solving: Ability to identify problems, generate solutions, and implement effective strategies.

Teamwork and Collaboration: Ability to work effectively with others, build strong relationships, and contribute to team goals.

Adaptability and Flexibility: Capacity to adapt to changing situations, priorities, and environments.

TERMINOLOGY

Agility: Ability to move quickly and with accuracy

Endurance: Ability to sustain prolonged physical activity or effort over an extended period of time.

Flexibility: Range of motion in a person's joints and muscles.

Gymnastics: Sports involving the performance of exercises requiring strength, flexibility, balance and control

Roll: To move with repeated turning or rotating motion.

Spotting:	Practice of assisting a gymnast during a skill or routine to ensure their safety.
Stunts:	Skills or acrobatic routines that are performed on various apparatus.
Tumbling:	Acrobatic movements performed on the ground or a tumbling track.
Vault:	To leap or spring over something, especially by pushing on it with the hands or using a pole.

Sub-topic: 1.6.1. Stunts and Tumbling activities.

Introduction.

This sub-topic specifically looks at Stunts and tumbling activities which refer to the skills performed that often involve lifting or supporting another gymnast and acrobatic movements performed on the ground or a tumbling track respectively.

Both stunts and tumbling are important to routines in gymnastics and are judged based on difficulty, execution and overall presentation. Through them, dedication, perseverance, resourcefulness, self-confidence and courage are developed. Gymnastic activities also contribute to overall physical fitness.

Specific competence(s):

1.6.1.1. Perform Tumbling and stunts activities

TIP

The teacher can teach the learners from any of the environments such as nature (gymnasium...), Artificial (Modified classroom, playing field...) and Technological (video clips, shows...)

Teaching materials/resources:

Gymnastics Mats, Spring Floors, Stretch Bands, Spotting Equipment, Spotting Blocks, trampoline, landing mats, gym balls (locally improvised materials; sacks filled with dried grass, leaves and sand, reed mats, old used tyres...)

➤ Learning activity:

- Discussing the importance of gymnastics. (*Flexibility, endurance, agility...*)

DISCUSSION

Learners should:

Task 1

In smaller groups discuss the importance of gymnastics.

CONTENT TIP

Physical fitness:

- Gymnastics help improve overall physical fitness including strength, flexibility, coordination and endurance.

Body awareness:

- Through tumbling, gymnasts develop a better understanding of their body's movements in space. This body awareness is important for carrying out difficult routines safely and effectively.

Balance and control:

- Improves balance and control, which help prevent injuries and improve performance.

Building strength:

- Stunts help develop arms and legs which are essential for overall gymnastics performance

Enhancing coordination:

- Performing stunts helps learners to coordinate their movements.

Encouraging fun:

- Participating in stunts can make practice enjoyable, keeping learners motivated and excited about gymnastics.

Agility

- Gymnastics help to control body movement in space with speed and accuracy.

Flexibility.

- Performing gymnastic activities will help an individual to execute skills more effectively and maintain proper form and body positioning.

➤ Learning activity

- Applying safety rules of gymnastic activities. (*Spotting, tuck-in your chin, for all rolls, inspecting equipment, follow instructions...*).

Learners should**Task 1**

Apply safety rules of gymnastic activities. (*Spotting, tuck-in your chin for all rolls, inspecting equipment, follow instructions...*).

**CONTENT TIP****Warm-up and stretching.**

- Always start with a proper warm-up to prepare the body and prevent injuries.

Use proper equipment:

- Ensure that all equipment is in good condition and suitable for the skill level of the gymnast.

Know your limits:

- Gymnasts should only attempt skills they are trained for and comfortable with.

Proper attire

- Wear appropriate clothing that allows for movement and does not pose a risk of entanglement.

Safe landing

- Learn how to fall safely to minimize injury risk.

Spotting:

- When learning new skills, a coach or partner should spot to provide support and reduce the risk of falls.

➤ Learning activity

- Performing tumbling and stunts activities. (*Traveling, static and rotational*)

Learners should

Task 3

In smaller groups perform a variety of stunts and tumbling activities.

CONTENT TIP

Tumbling activities involve acrobatic movements performed on the ground or a tumbling track

Examples of tumbling activities

- Forward roll
- Astride vault
- Backward roll
- Hand stand with support
- Head stand...

Stunts refer to physical activities that require strength, flexibility, balance and control. These can often be performed on various apparatus such as the floor, balance beam vault and uneven bars.

Examples of stunts activities:

- Forward roll
- Backward roll
- Cartwheel
- Bridge
- Angel rise
- Shoulder-knee balance.

The Bridge

Forward roll**Hand stand with support****Expected standard**

- Tumbling and stunts activities performed properly.

**ASSESSMENT CRITERIA**

1. Multiple-choice quizzes
 - Accuracy (correct selection of answers).
 - time management (complete tasks within the given time)
 - understanding of concepts (reflecting knowledge of concepts)
2. Short-answer questions
 - Relevance (answers directly addressing the question)
 - Completeness (include all necessary points and explanations)
 - Accuracy (correct information and use of terminologies.)
3. Essay questions

- Content and relevance (address the topic with accurate and relevant details)
 - Organization (clear introduction, body and conclusion)
 - Depth of analysis (shows critical thinking and understanding)
 - Examples and support (includes appropriate example and evidence)
 - Language and mechanics (grammar, punctuation, spelling and expression.)
4. Group project, Research and Field trip reports
- Collaboration and contribution (equal participation, teamwork and communication.)
 - Creativity and initiative (original ideas and thoughtful presentations.)
 - Presentation, if oral (clear, confident and well-coordinated)
5. Class participation and engagement (Debates)
- Preparation (demonstrate research and readiness)
 - Active participation (engaged, contributes meaningfully)
 - Critical thinking (presents logical and relevant arguments)
 - Communication skills (speak clearly, listens actively)
 - Respect and collaboration (maintains respectful dialogues and good teamwork.)
6. Practical
- Skill execution (performs task with correct technique and form)
 - Application of theory (shows understanding of rules)
 - Safety and discipline (follows instructions and uses equipment safely)
 - Participation and effort (actively involved and shows enthusiasm)
 - Progress or improvement (demonstrates learning overtime.)

**SUMMARY**

- Gymnastics comprise tumbling and stunts activities which involves systematic and rhythmic exercises on the floor (ground), bars and apparatus.
- Gymnastics defines activities which arise when a performer tries their ability to control the body movement.
- These exercises promote strength, agility, co-ordination and body control.
- The performance of gymnastics skills is very subjective (personal) because it is practical without the use of any designed measurement.
- The results will therefore entirely depend upon human judgment and interpretation.
- Safety precautions and rules to be applied when performing gymnastic activities include Use of proper equipment, knowing your limits, using Proper attire, Safe landing, Spotting...

TOPIC: 1.7 RECREATIONAL GAMES AND ACTIVITIES

INTRODUCTION

Recreational games are a structured form of play, usually undertaken for enjoyment, relaxation, and sometimes competition. They can be physical, mental, or a combination of both, and are always played according to specific rules. Recreational games and activities refer to those played primarily for fun, fitness, relaxation, and social interaction rather than for serious competition. They are an important part of physical education and holistic development, providing opportunities for learners to engage in enjoyable movement-based experiences.

These activities play a vital role in promoting physical fitness, mental well-being, and social development. They serve as a stress reliever and create an engaging way for individuals to stay active and healthy. Recreational games also help foster essential life skills such as teamwork, leadership, communication and strategic thinking.

Recreational activities are highly inclusive, catering to diverse interests, ages, and ability levels. They may include aerobic games (like dance, tag, or relay races...), traditional games (often rooted in cultural heritage), and group activities that promote cooperation and emotional intelligence. In educational settings, these games help create a dynamic learning environment where learners not only exercise but also express themselves creatively and socially.

General competences:

Learners should acquire the following general competencies:

Analytical thinking: Ability to observe, navigate, analyse, design, judge and depict objects either natural or artificial.

Emotional intelligence: ability to demonstrate sports etiquette, express self-awareness, self-management and build relationships with others.

Communication: Ability to effectively convey ideas, thoughts, and information through verbal and non-verbal means.

Critical Thinking: Capacity to analyze information, evaluate evidence, and form informed opinions and decisions.

Problem-Solving: Ability to identify problems, generate solutions, and implement effective strategies.

Teamwork and Collaboration: Ability to work effectively with others, build strong relationships, and contribute to team goals.

Adaptability and Flexibility: Capacity to adapt to changing situations, priorities, and environments.

TERMINOLOGY

Aerobics: Exercises that combine rhythmic activities with stretching and strength training routines

Aerobic Activity: Any physical activity that increases the heart rate and promotes cardiovascular health (e.g., jogging, skipping, dance games).

Beat: Underlying rhythm of music

Culture: Shared beliefs, values, customs and behaviors of a group of people.

Game: Any activity or sport that involves structured play, often with rules and objectives.

Meter: Rhythmic structure of music.

Recreational: Activities that are done for enjoyment, relaxation and leisure.

Rhythm: pattern of sounds and silences in music or speech.

Rules: Specific guidelines that dictate how a game is played

Tempo: Speed pace at which a piece of music is played or performed.

Sub-topic: 1.7.1. Aerobics.

Introduction:

Aerobic dances refer to rhythmic body movements with or without music following a certain rhythmic pattern. Aerobics can be non-loco motor or locomotor, and can be done individually, in pairs or in groups. They can be accompanied by music or routine counts and claps. Jumps and swings can also be included. In aerobics, rhythm is the basis of music and dance. It plays a major role in our lives. In order to respond very well to the rhythmic dancing styles, one has to be physically fit.

Specific competence(s):

1.7.1.1. Perform step and rhythmic patterns of aerobics

TIP

The teacher can teach the learners from any of the environments such as nature (playing fields, hall, room or any open space...), Artificial (Modified classroom, ...) and Technological (video clips, shows...)

Teaching/learning resources:

Step Platforms, Workout Mats, Proper Footwear, Music System, Fitness Tracker, hoops, ropes, resistance bands, dumb bells, cones markers... (locally improvised materials; fiber, bottles, self-made balls bean balls...)

➤ **Learning activity:**

- Demonstrating step and rhythmic patterns of aerobics.
(Rhythmic patterns and steps, legs and arms stretch, sidekicks, neck, roll...).

DISCUSSION

Learners should:

Task: 1

In groups, explore various sources of rhythmic accompaniment, their unique characteristics, and the features of rhythmic backgrounds.

CONTENT TIP

Guide the learners that they can learn both the music and the words, allowing them to provide their own accompaniment.

- Dance drum.
- Record player.
- C.D. player.
- Cassette player.
- Piano.
- Tape recorder.
- Tambourine.
- Rhythm bands.
- Guitar.
- Clapping or stamping
- Rattles,

Characteristics of rhythmic background

CONTENT TIP

Learners to recognise, understand and appreciate the music characteristics which are also present in other purely rhythmic accompaniments which include:

Tempo

- This is the speed of the music. It can be constant or show a gradual increase or decrease.

Beat

- This is the underlying rhythm of music. Sometime it is referred to as the pulse of the music. Music with pronounced beat is easier to follow.

Meter

- This refers to the manner in which the beats are put together to form a measure of music. It is typically noted at the beginning of a piece with a time signature which consists of two numbers. Common meters include: - , , and .

CONTENT TIP

In smaller groups, learners should perform various rhythmic patterns of aerobics while applying the three fundamentals of rhythm.

- ❑ **Locomotor movements:** These are rhythmic movements that enable an individual to move from one place to another. Examples include walking, running, jumping, hopping, skipping and leaping.
- ❑ **Non-locomotor movements:** These are rhythmic movements that are performed without changing location, only body parts are the ones that move. Examples include bending, stretching, twisting, swaying and balancing.

- ❑ **Manipulative movements.** These movements involve the control and movement of objects using the body or handling objects. Examples include actions like throwing, catching, kicking dribbling and striking

Expected standard

Step and rhythmic patterns of aerobics performed accurately.

Sub-topic: 1.7.2. Traditional games.

Introduction:

Traditional games are activities passed down through generations, associated with specific ethnic groups or societies. They often feature simple rules, require minimal equipment, and have unknown origins or discoverers.

Traditional games serve various purposes, including entertainment, socialisation and education. They can be played indoors or outdoors and often involve physical activity, teamwork and strategy.

Examples include games like tag, hide and seek, and various board games that reflect the customs and value of a particular culture. Traditional games not only provide fun but also help in preserving cultural identity and fostering community bonds.

Specific competence:

1.7.2.1. Perform traditional games

TIP

The teacher can also teach the learners from any of the environments such as Natural (playing grounds...), Artificial (Modified classroom...) and Technological (video clips, shows...)

Teaching/learning resources:

Skipping ropes, Chalk for marking, cones, Drums, Clapping or rhythm sticks,

➤ Learning activity:

- Performing traditional games. (*Jumping games, Rhythmic, Manipulative, break-through...*).

ACTIVITY:

Learners should:

Task 1:

Research and perform the indigenous Zambian Traditional games that are practiced or played in their various communities.

Chasing games.

- Chain tag game...

Breakthrough games

- Sheep-sheep come all...

Rhythmic Games.

- Musical Chairs: Players walk around a circle of chairs while music plays. When the music stops, learner must find a chair to sit in. The player left standing is out.

...

Knowledge testing games.

- Who Am I? Players guess the name of a famous figure or concept using hints provided by others, ...

Manipulative and Calculative Games.

- A variety of Zambian manipulative and calculative games to be researched and discussed

Task 2

Highlight the importance of Zambian Traditional Games.

CONTENT TIP

In smaller groups learners to discuss the importance of Zambian Traditional Games.

Preservation of Cultural Heritage

- Traditional games are a way of passing down customs, values and stories from one generation to another.
- They reflect Zambia's rich ethnic diversity and promote pride in indigenous identities.
- They promote, preserve and maintain cultural values in society.
- They consolidate historical background of cultures
- They also provide and promote acceptance and appreciation of other cultures from different backgrounds and regions.

Social Development

- Most games are played in groups, promoting teamwork, cooperation, and communication.
- Learners acquire important social skills like turn-taking, fairness, leadership, and conflict resolution.
- They prevent anti-social behavior and vandalism.
- They are a source of enjoyment and fun.
- They act as an agent of socialization in the society
- They build adolescence belief in their ability to influence or resist their peers

Physical Development

- Traditional games involving running, jumping, chasing, or balancing help improve motor skills, physical fitness, and coordination.
- They encourage learners to stay active and healthy through play.

Mental and Cognitive Growth

- Traditional games stimulate critical thinking, problem-solving, memory and numeracy.
- Knowledge-based games enhance language development and creativity.

- They help promote self-esteem and confidence in oneself.

Emotional Well-being

- Participating in traditional games boosts confidence and self-esteem as learners learn to win and lose gracefully.
- Traditional games provide a healthy outlet for releasing energy and emotions, reducing stress and anxiety.
- They help to teach good attitudes to learners.

Education through Informal Learning

- Traditional games naturally integrate learning into play, making it easier for learners to grasp academic and life concepts.
- Concepts like counting, strategy, and rhythm are learned in a fun and engaging way.
- They act as informal education process.

Inclusion and Accessibility

- Traditional games require minimal or no equipment, making them accessible to learners in both urban and rural areas.
- They often encourage inclusivity, allowing learners of different ages and abilities to participate.

Community Bonding

- During festivals or communal gatherings, traditional games bring people together across generations, reinforcing a sense of belonging and unity.
- Traditional games help shape children into responsible and respectful adults by teaching important values such as honesty, patience, perseverance, discipline and respect for others.

Expected Standard-

Zambian Traditional games performed correctly.

ASSESSMENT CRITERIA

1. Multiple-choice quizzes
 - Accuracy (correct selection of answers).
 - time management (complete tasks within the given time)
 - understanding of concepts (reflecting knowledge of concepts)
2. Short-answer questions
 - Relevance (answers directly addressing the question)
 - Completeness (include all necessary points and explanations)
 - Accuracy (correct information and use of terminologies.)
3. Essay questions
 - Content and relevance (address the topic with accurate and relevant details)
 - Organization (clear introduction, body and conclusion)
 - Depth of analysis (shows critical thinking and understanding)
 - Examples and support (includes appropriate example and evidence)
 - Language and mechanics (grammar, punctuation, spelling and expression.)

4. Group project, Research and Field trip reports
 - Collaboration and contribution (equal participation, teamwork and communication.)
 - Creativity and initiative (original ideas and thoughtful presentations.)
 - Presentation, if oral (clear, confident and well-coordinated)
5. Class participation and engagement (Debates)
 - Preparation (demonstrate research and readiness)
 - Active participation (engaged, contributes meaningfully)
 - Critical thinking (presents logical and relevant arguments)
 - Communication skills (speak clearly, listens actively)
 - Respect and collaboration (maintains respectful dialogues and good teamwork.)
6. Practical
 - Skill execution (performs task with correct technique and form)
 - Application of theory (shows understanding of rules)
 - Safety and discipline (follows instructions and uses equipment safely)
 - Participation and effort (actively involved and shows enthusiasm)
 - Progress or improvement (demonstrates learning overtime.)

SUMMARY

- ☐ Aerobics and traditional games are both engaging forms of physical activity that promote fitness and social interaction.
- ☐ Aerobics involves rhythmic exercises performed to music, focusing on cardiovascular, flexibility and strength.
- ☐ They include various styles like step aerobics or dance aerobics.
- ☐ Traditional games are cultural activities passed down through generations, often played in groups.
- ☐ They encourage teamwork, critical thinking and physical activity while preserving cultural heritage.
- ☐ Both aerobics and traditional games contribute to a healthy lifestyle while providing enjoyment and community bonding.

TOPIC: 1.8 SWIMMING

INTRODUCTION

Swimming refers to the act of moving through water using coordinated movements of the arms and legs typically employing specific strokes. It can also describe gliding or floating effortlessly on the water's surface. Throughout history, swimming has been an important survival skill and a valuable recreational and competitive activity.

In modern times, swimming is widely recognized for its many benefits. It provides a full-body workout, improving cardiovascular endurance, muscle strength, flexibility and coordination. Whether enjoyed for fun with friends and family or pursued as a competitive sport, swimming promotes both physical and mental well-being.

This topic focuses on introducing learners to the fundamentals of swimming with special attention to water safety practices and acceptable pool hygiene.

General Competencies to be attained by learners:

Creativity and Innovation: Applying knowledge and skills in new and creative ways.

Problem-Solving: Tackling real-life issues using various strategies.

Collaboration: Appreciating and acknowledging group members' views while participating in activities.

Communication: Using appropriate language (verbal and non-verbal) in different situations.

Analytical Thinking: Observing, analyzing and evaluating situations for better judgment.

Environmental Sustainability: Learning environmental ethics and adopting protection strategies.

TERMINOLOGY

- ☐ **Aquatic:** anything related to water.
- ☐ **Buoyancy:** the force that allows objects to float in a liquid like water.
- ☐ **Cardiopulmonary Resuscitation (CPR):** A lifesaving technique to restore blood circulation and breathing in someone who has stopped breathing or whose heart has stopped.
- ☐ **Conscious:** Being aware and able to think about one's surroundings, thoughts, and emotions.
- ☐ **Micro-organisms:** Tiny living organisms often too small to be seen with the naked eye.
- ☐ **Rescuer:** A person who saves someone from a dangerous or harmful situation.
- ☐ **Rip Currents:** Powerful, fast-moving waves of water that flow from the shore to deeper waters.
- ☐ **Scenario:** An imagined or planned situation that describes a particular setting.

- ❑ **Submerging:** Completely sinking something under the water's surface.
- ❑ **Swimming:** Moving through water by using limbs or floating.
- ❑ **Waterborne Illnesses:** Diseases caused by harmful microorganisms in contaminated water.

Sub-Topic: 1.8.1 Water Safety

Introduction:

Water safety refers to the practices, precautions and awareness needed to prevent accidents, injuries or drowning in aquatic environments. Participating in water activities requires personal responsibility, respect for safety guidelines and an understanding of water conditions. Whether in a swimming pool, lake, river or ocean, being careless or unaware of basic safety rules can lead to serious consequences.

Specific Competence:

1.8.1.1 Apply water safety practices.

TIP

The teacher can teach the learners from any of the environments such as Natural (classroom...), Artificial (Swimming pool...) and Technological (video clips, simulators...)

Teaching/learning materials:

Charts and diagrams, markers and digital devices. Instructional videos, goggles, swimming caps floatation props, first aid kit, whistle... (locally improvised materials; plastic bottle sealed with lids tied together to create float aids, empty containers, banana barks, dried calabash...)

➤ Learning Activity:

- Creating simulated water safety scenario. (*Mock pool emergency...*)

ACTIVITY:

Learners Should:

Task 1: simulate a pool emergency scenario.

Setup:

- Arrange towels on the floor to outline a “pool” area.
- Place floatation devices nearby.
- Take up roles as assigned by the teacher.
- Create a scenario where a swimmer appears to be drowning or in distress.

TIP

Teacher to give the following roles to learners and guide them through the scenario

- ☐ **Lifeguard** must observe, identify the emergency, blow the whistle, and perform an appropriate rescue using a floatation aid — *without jumping in*.
- ☐ **Onlookers** must react realistically: panic, call for help, or try to assist (safely).
- ☐ **Emergency responders** must be “called” and arrive to provide further assistance, including **CPR** or **first aid** if needed.
- ☐ **Swimmer in distress/victim** should act as though they are struggling in water (safely dramatized).
- ☐ Guide the scenario step-by-step.
- ☐ Pause the activity at key moments to ask questions like:
 - *What did the lifeguard do correctly?*
 - *Did anyone enter the water unnecessarily?*
 - *How could onlookers have helped more safely?*
- ☐ Encourage reflection and improvement after each run-through.

Task 2: Scenario Execution

In groups, act out roles as assigned in task 1.

- ☐ **Lifeguard:**
 - ☐ Quickly notices the emergency.
 - ☐ Assesses the situation.
 - ☐ Gives clear verbal commands to onlookers (Call for help! Stay back!).
 - ☐ Uses a floatation device to assist the swimmer without entering the water, unless absolutely necessary.
- ☐ **Swimmer in Distress / Victim:**
 - ☐ Acts out the chosen emergency realistically (but safely).
 - ☐ May show signs of panic, confusion, unconsciousness, or cramping.
- ☐ **Onlookers**
 - ☐ React realistically (*some may panic; others may be helpful*).
 - ☐ Listen to the lifeguard and follow instructions (*calling emergency services, bringing a floatation device*).
- ☐ **Emergency Responders:**
 - ☐ Arrive on the scene when called.
 - ☐ Simulate first aid or CPR if needed.
 - ☐ Talk through their actions clearly (*check for breathing and call for medical personnel*).

**CONTENT TIP**
☐ Learning Activity:

- Researching and presenting about different water safety topics. (*Rip currents, pool safety, water-borne illnesses...*).

**ACTIVITY:****Learners should:****Task 1**

In small groups, conduct a research, identify key facts, risks and prevention strategies related on the following topics as assigned by the teacher

- Rip currents
- pool safety
- water-borne illnesses ...

Each group will create a visual aid (*Poster/slideshow*) and prepare a brief presentation.

**CONTENT TIPS****Rip currents:**

- ☐ These are powerful, fast-moving channels of water that flow from the shore to deep water.
- ☐ They appear as darker, uneven water with a noticeable difference in wave pattern.
- ☐ They often pull swimmers away from the shore because they flow from the shore toward deeper water in a narrow fast-moving current.

Pool safety:

- ☐ Use pool covers when the pool is not in use to prevent accidental falls or drownings.
- ☐ Limit the use of alcohol or drugs while swimming.
- ☐ All individuals, especially children at an early age must learn to swim to increase safety in the water.
- ☐ Know how to administer Cardiopulmonary Resuscitation
- ☐ Regularly keep the pool clean and well maintained to prevent accidents
- ☐ Shallow and deep end safety must be marked clearly so as to prevent swimmers jumping or diving in shallow water.

Waterborne illnesses:

- ☐ These are diseases caused by harmful microorganisms (bacteria, viruses and parasites) found in contaminated water which can lead to Bilharzia, typhoid, dysentery, cholera...
- ☐ These can occur when people swim, drink or come into contact with contaminated water, especially in pools, lakes, rivers or even oceans.

➤ Learning Activity:

- ❑ Demonstrating water safety practices. (*Use of life jacket, walking safely, hygiene, depth of the pool, Life-saving practices: breathing ...*).

ACTIVITY:

Learners should:

Task 1:

Depth of the pool awareness

- ❑ Set-up a “depth quiz” with colored markers such as red for shallow, blue for deep where learners will match activities like diving or wading to the correct zones.
- ❑ In groups, do an audit of what the school swimming pool (if available) has and what it does not have. Write a brief report of what should be done to make it an ideal safe place for learning how to swim and what should be put in place before swimming starts. Present the findings and suggestions.
- ❑ If the school does not have a swimming pool, groups can do a theoretical audit or watch a video showing a swimming pool, then discuss what an ideal and safe swimming pool should have.

Task 2:

Practice Life-saving skills

Rescue scenarios:

- ❑ Practice “Reach, Throw, Don’t Go” methods using poles, ropes or floatation devices to assist a struggling swimmer without entering the water.

Cardio-Pulmonary Resuscitation (CPR) Practices:

- ❑ Perform chest compressions and rescue breathing on a fellow learner or training model.

Passive drowning response:

- ❑ Role-play rescuing an unconscious swimmer, securing them face-up and towing them to safety.

CONTENT TIPS

Pool depth awareness

- ❑ Identify shallow and deep ends using tiles, signs or ropes
- ❑ Practice entering feet first in shallow water and using ladders or steps
- ❑ Test floating in different depths to understand how buoyancy varies.

Expected Standard: Water safety practices applied correctly.

Sub-Topic: 1.8.2 Pool

Introduction:

A pool is a specially built area filled with water where people swim, play or learn water skills. Pools can be found in schools, homes or public places and they come in different shapes, sizes and depths to suit different activities and age groups.

To keep the pool safe and enjoyable for everyone, pool hygiene and good practices are very important. This means keeping the water clean, avoiding littering, showering before entering the pool and not swimming when sick. Safe behavior like walking instead of running near the pool and following pool rules also helps prevent accidents and protects the health of all swimmers.

Specific Competence(s):

1.8.2.1 Practice pool hygiene.

CONTENT TIPS

The teacher can teach the learners from any of the environments such as Natural (classroom...), Artificial (Swimming pool...) and Technological (video clips, simulators...)

➤ Learning Activity:

- Practicing Pool Hygiene: *(Avoid spitting, take a shower before entering the pool and avoid urinating or defecating in the water...).*

ACTIVITY:

Learners Should:

Task: 1

In smaller groups identify good pool practices, design posters highlighting key rules on pool hygiene and display them as guided by the teacher.

CONTENT TIPS

- ☐ Never swim immediately after a heavy meal. Wait at least 30 minutes after a light meal, or more after a heavy meal.
- ☐ Always shower before swimming. For sanitary reasons it is very important for a person to take a shower before entering the pool. It is also advised to shower after swimming.
- ☐ Always put on the correct swimming costume.
- ☐ Water must always be kept clean by not spitting, urinating, or defecating in the water
- ☐ Not to chew gum or anything while swimming.
- ☐ Not to eat or drink in the pool premises.

➤ Learning activity

- Debating Pool Hygiene Practices (pool cleaning, maintenance...)

Learners Should:

Task: 1

Debate for or against the following motions concerning pool hygiene practices

Motions:

1. Public swimming pools should implement mandatory hygiene checks before

opening each day to ensure water safety and cleanliness.

- This motion encourages debate on whether it should be a requirement for pools to undergo routine hygiene inspections and checks for cleanliness before opening to the public each day.
2. Recreational floatation devices should be banned in public swimming pools to improve water hygiene and prevent contamination.
 - This motion focuses on the pros and cons of banning floatation devices in public pools as a measure to reduce contamination and maintain cleaner water.
 3. learners should be required to wear approved swimming costumes in public pools to ensure better hygiene and prevent the spread of germs.
 - This motion argues whether it should be mandatory for children to wear specific swimming attire designed for hygiene purposes when using public swimming pools.

TIP

Teacher to guide learners with other different motions for them to appreciate pool hygiene practices.

Expected Standard: Pool hygiene practices performed effectively.

ASSESSMENT CRITERIA

1. Multiple-choice quizzes
 - Accuracy (correct selection of answers).
 - time management (complete tasks within the given time)
 - understanding of concepts (reflecting knowledge of concepts)
2. Short-answer questions
 - Relevance (answers directly addressing the question)
 - Completeness (include all necessary points and explanations)
 - Accuracy (correct information and use of terminologies.)
3. Essay questions
 - Content and relevance (address the topic with accurate and relevant details)
 - Organization (clear introduction, body and conclusion)
 - Depth of analysis (shows critical thinking and understanding)
 - Examples and support (includes appropriate example and evidence)
 - Language and mechanics (grammar, punctuation, spelling and expression.)
4. Group project, Research and Field trip reports
 - Collaboration and contribution (equal participation, teamwork and communication.)
 - Creativity and initiative (original ideas and thoughtful presentations.)
 - Presentation, if oral (clear, confident and well-coordinated)
5. Class participation and engagement (Debates)
 - Preparation (demonstrate research and readiness)

- Active participation (engaged, contributes meaningfully)
- Critical thinking (presents logical and relevant arguments)
- Communication skills (speak clearly, listens actively)
- Respect and collaboration (maintains respectful dialogues and good teamwork).

6. Practical

- Skill execution (performs task with correct technique and form)
- Application of theory (shows understanding of rules)
- Safety and discipline (follows instructions and uses equipment safely)
- Participation and effort (actively involved and shows enthusiasm)
- Progress or improvement (demonstrates learning overtime.)

SUMMARY

- ☐ Swimming is a highly beneficial physical activity that offers numerous advantages for both the body and mind. Physically, it enhances cardiovascular health, builds muscle strength, and improves flexibility. Mentally, it reduces stress, promotes relaxation, and boosts overall mood.
- ☐ Practicing water safety is crucial for preventing accidents and ensuring the well-being of individuals in and around water.
- ☐ Proper pool hygiene is essential for a healthy swimming environment. Maintaining good pool hygiene is a shared responsibility between pool owners and swimmers. Regular cleaning, chemical treatment and adhering to these practices help prevent the spread of waterborne diseases and ensure a safe and pleasant experience for all swimmers

SAMPLE LESSON PLAN**SCHOOL:** Waida Secondary School**DATE:** 05/05/2025**NAME OF TEACHER:** John James**TIME:** 07:30 – 09:50**LEVEL:** Form 1M**DURATION:** 80 Mins**TOTAL ENROLMENT:** BOY: 25 GIRLS: 28**TOTAL ATTENDANCE:** BOYS:24 GIRLS: 28**SUBJECT:** Physical Education and Sports**TOPIC:** 1.5 Physical Fitness**SUB-TOPIC:** 1.5.1 Health related components.**GENERAL COMPETENCES:**

- i. Collaboration
- ii. Communication
- iii. Creativity and innovation
- iv. Problem solving
- v. Analytical thinking
- vi. Emotional intelligence

SPECIFIC COMPETENCES: 1.5.1.1 Perform health related activities.**RATIONALE:**

This lesson will help learners to develop physical fitness, coordination and focus which are essential for both athletic performance and personal growth. It is number one (1) of the three (3) lessons in the learning activities.

PRIOR KNOWLEDGE:

Learners have been involved in various sporting activities or games that demand the use of muscular strength, cardiovascular endurance, flexibility, muscular endurance and body composition (cycling, skipping, lifting objects ...)

REFERENCES:

- PES Teaching module Term 2, Page ...
- PES Syllabus, page 4 –
- Advanced Studies in Physical Education and Sport, page 80 - 109

LEARNING ENVIRONMENT:

- Natural environment (classroom ...)
- Artificial environment (modified room ...)
- Technological environment (video clips, ...)

TEACHING AND LEARNING MATERIALS/RESOURCES:

- Video clips, pictures, charts, whiteboard...

EXPECTED STANDARD: *To be indicated upon successful execution of all the components outlined under health-related activities.*

LESSON PROGRESSION:

STAGES	TEACHER'S ACTIVITY	LEARNERS' ACTIVITY	FORMATION	ASSESSMENT CRITERIA
INTRODUCTION 5mins	Introduces the lesson by asking learners on health-related fitness	Answering questions based on their experience.		● Observe learner engagement and participation
LESSON DEVELOPMENT 30mins	● Provides a video clip or displays pictures depicting various sporting activities. ● Divides the class into smaller groups and assigns tasks.	● watching a video or displayed pictures depicting various sporting activities, athletes using components of health-related fitness. ● In groups, identifying health related fitness activities in relation to what they observed from the video clip or pictures.	Semi – circle Small groups	● Assessing learners' ability to identify and discuss health related fitness
	● Guides the learners as they discuss the components of health-related fitness. (<i>muscular strength, cardiovascular endurance, flexibility ...</i>)	● Discussing the components of health-related fitness in relation to their definitions.	Small groups	□ Assess learners' ability to contribute points in line with health-related fitness.

EXERCISE / APPLICATION 30mins	● Guides learners in their presentations.	● Making presentations arising from their discussions in groups.	Plenary session	● Learners present logical arguments and counter arguments effectively.
CONCLUSION 15mins	● Summarises key learning points	Learners summarise key take-aways from the lesson and share personal reflections.		Learners articulate their understanding on the key concepts

HOMEWORK:

Observe different activities being performed by people around you. Analyse how each component of health-related fitness is being utilised. Thereafter, write its benefits to the user in relation to their physical, mental and social health.

LESSON EVALUATION:

Lesson was successfully taught. Learners were able to identify and discuss health-related fitness using available teaching/learning materials such as video clips, charts The methods used in the lesson were group discussion, question and answer, individual work which stimulated active participation. However, some learners needed support on identifying different health-related fitness hence homework was given.
