Preface

The **Physical Education and Sport Teaching Module** for **Form 1** has been developed in response to the introduction of the **Competence-Based Curriculum (CBC)**, a transformative initiative aimed at enhancing quality education and relevance.

This teaching module is designed to support teachers to effectively deliver Physical Education and Sport lessons under the new curriculum. Its primary objectives are to, bridge the gap created by the absence of approved textbooks and equip teachers with practical skills and assessments tailored to learners' needs and levels.

The Ministry of Education acknowledges the challenges associated with transitioning to a new curriculum. Consequently, this module reflects our commitment to providing teachers with structured guidance, suggested activities, formative and summative assessments aligned with the CBC's objectives.

While this module serves as a foundational resource, we encourage teachers to supplement it with their own research and innovations to address potential gaps during implementation. The suggested activities and assessments are designed to foster practical and critical thinking skills in learners, ensuring relevance and adaptability across diverse school contexts.

Teachers are encouraged to tailor these suggestions to their unique classroom dynamics and explore alternative approaches when necessary. We hope this module will empower teachers to navigate the new competence-based curriculum with confidence, inspiring and equipping learners with applied knowledge, skills, and values.

Kelvin Mambwe (PhD)
Permanent Secretary- Educational Services
MINISTRY OF EDUCATION

Acknowledgement

The **Physical Education and Sport Teaching Module for Form 1** is the culmination of a collaborative and inclusive development process. Sincere appreciation is extended to the numerous individuals, institutions, and organisations that contributed to the teaching module's development.

I am grateful for the technical support provided by teachers, Lecturers from Colleges of Education and Universities, Subject Associations, Civil Society Organisations and Cooperating Partners. Their invaluable input and expertise have enriched the content and quality of this teaching module.

I also acknowledge the dedication and hard work of the staff at the Curriculum Development Centre, whose tireless efforts ensured the successful completion of the teaching module development process.

Charles Ndakala (Dr.)

Director - Curriculum Development

INTRODUCTION

The Competence-Based Curriculum (CBC) is designed to equip learners with competences necessary to navigate the complexities of the modern world. This Physical Education and Sport (PES) teaching module is tailored to support teachers in implementing the CBC, focusing on the attainment of specific competences of specified sub-topics as indicated in the syllabus, but aligned to the general competences like creativity and innovation, critical thinking, problem-solving, and effective communication.

Each specific competence is supported by carefully designed learning activities that cater for diverse learning styles and abilities. These learning activities further give guidance on how they should be effectively administered to the learners to meet the expected standards that speak to the specific competences. Furthermore, this module encourages teachers to assess learner progress using a range of strategies.

By using this PES teaching module, teachers will be able to support learners to acquire competences outlined in the syllabus. In turn, learners will develop practical skills and enhancement of talents, creativity, self-expression and a sense of aesthetics.

1.9 SPORTS SKILLS DEVELOPMENT

INTRODUCTION

Sports skill development refers to the process of acquiring, improving and refining the physical, technical, mental and social abilities required to participate and excel in various sports. This includes physical attributes such as speed, agility, endurance, strength, balance, and coordination. In addition to physical training, effective sports development also focuses on mental skills like focus, decision-making, and resilience, as well as social skills such as teamwork, leadership, discipline, and communication.

This topic equips learners with a comprehensive understanding of the techniques, strategies, and demands of different sports, categorised into athletics, ball games, board games, and racquet games.

Learners should acquire the following general competencies:

Communication: Ability to effectively convey and receive information.

Citizenship: Accept responsibility for one's deeds through sportsmanship.

Collaboration: Appreciate and acknowledge the views of group members while participating in activities.

Problem-Solving: Capacity to adapt to new situations and challenges.

Emotional Intelligence: Express self-awareness, self-management and build relationships with others.

Analytical thinking: Ability to observe, navigate, analyze, design, judge and depict objects either natural or artificial.

Creativity and Innovation: Apply knowledge and skills in new and creative ways.

TERMINOLOGY

Adaptability: Adjusting to changing circumstances and opponents.

Algebraic notation: This is a standard system used to record and describe moves in chess.

Castling: A special move in chess that allows a player to move the king and a rook at the same time.

Crosscourt: A shot hit diagonally into the opposite court

Distance Running: Running over longer distances, requiring endurance and stamina.

Double hit: An illegal hit in which the racket contacts the shuttle twice in one swing

Dribbling: Controlling a ball with the hands or feet while moving.

En passant: a special pawn capture in chess that occurs under a specific condition.

Face: The string area of the racket

Footwork: Moving efficiently and effectively around the court.

Pattern Recognition: Identifying and exploiting patterns in the game

Shooting: Propelling the ball toward a goal or target.

Sprinting: Running at maximum speed over a short distance.

Stroke Production: Generating power and control when hitting the ball.

Torso: the central part of the human body which refers to the trunk

Sub-Topic 1.9.1 Athletics

Introduction:

Athletics is a core sport that comprises various track (running) and field (jumping and throwing) events. It is one of the oldest and most popular sports worldwide, focusing on individual performance and physical fitness.

In this topic, learners will focus on sprints which are short distance races that test speed and explosive power, middle distance races which focus on both speed and endurance as well as relay races which focuses on teamwork, timing and coordination. Through performing these skills, learners will improve their running techniques, physical conditioning and team work, while gaining confidence and self-esteem in their athletic abilities.

Specific Competence(s) 1.9.1.1 Perform skills in track events

TIP

The lesson on skills in track events can be conducted in a Natural environment (the running track). The teacher can also teach the learners from any of the environments such as Artificial (Modified classroom...) and Technological (video clips, shows...).

Teaching/learning material

Running spikes or athletic shoes, starting blocks (for sprints), relay batons, whistle, stop watch, track markings, cones, measuring tapes... (locally improvised materials; flat rubbers or plastic sandals, wooden blocks or bricks as starting blocks, road up paper or sticks as relay batons, chalk or strings for marking lanes on the ground, home-made stop watch using mobile phones or timer apps...)

❖ Learning Activity

- Performing skills in track events. (Sprints, middle-distance, relays...).

DISCUSS

Learners should:

Task 1

Discuss and mark the running track using the standard dimensions.

CONTENT TIP

Track Events

A standard running track is 400m long, and has eight (8) lanes which are staggered at the starting points.

ACTIVITY

Learners should:

Task 2

In smaller groups, perform skills in the following categories in track events. (*Sprints, middle-distance, relays...*).

Sprints

These are short races that are run at maximum speed with explosive strength, full force and high intensity. The following are the categories of sprints (dashes).

- 60 m
- 100 m
- 200 m
- 400 m

- 4 x 100 m relay
- 4 x 400 m relay
- Medley relay

Basic rules for sprints

The following are the basic rules that should be adhered to:

- Running on lanes
- Obeying the commands- “On your marks, Set, Go (gun firing, whistling, clapping, shouting...)
- No athlete should cross the starting lane before gun-firing or whistling.
- When using starting blocks, some foot part should be in contact with the track
- Should an individual/ athlete continue false starting twice then he/ she is disqualified
- When a false start is made, all athletes are on a yellow card & whoever makes a false start again receives a red card and automatically sent off/ disqualified.
- If the runner falls down on reaching the finishing line and his hands & feet are inside the track his race is not considered to be complete.

Relay races.

- Relays are team events featuring four runners who should run the same distance. They run with a baton which must be passed on from one runner to another.

Types of relay races

- 4x100m
- 4x400m
- Medley

Rules governing relay races

- Stations for teams are drawn for each team retains/ keeps each station throughout the race. This mostly apply in 4x100m relay
- In the 4x400m, the first lap will be run in lanes. Part of the second lap, up to the end of the first curve (100m) will also be run in lanes. After this, the runners then are free to take any position on the track. Staggered starts are used in this relay.
- The baton must be passed inside the 20m passing/ exchange zone
- The baton must be carried in the hand throughout the race
- After passing the baton, the runner may not interfere with an opponent
- A baton dropped within the zone may be collected by either outgoing or incoming runner.
- A baton dropped outside the zone must be collected by the runner who dropped it.
- For relay legs that are 200m or less, the outgoing runner may line up 10m in front of the exchange zone, but the pass must occur within the 20m exchange zone.
- Assistance by pushing off/ any other method will cause disqualification of his/her team.
- No competitors may run two sections for a team.

Middle distance race

- These are races longer than sprint/dashes and require a combination of speed, endurance and strategy.

Types of Middle distance race

- 800 m
- 1500 m

Rules governing middle races

- No obstruction of other runners
- One false start results in disqualification
- No starting blocks.
- In 800m race, runners must stay in their assigned lanes until they reach the break line.
- 1500m usually start in a curve, with a break line after the first bend.
- A runner may overtake another only when it is safe and without contact.
- Overtaking only happens on the outside and not the inside of the curve.
- The winner is the runner whose torso first crosses the finish line (not arms or head)

Expected standards

Skills in track events performed properly.

Sub-Topic:1.9.2 Ball games**Introduction:**

Ball games are sporting activities that involve the use of a ball and require players to apply various physical skills and tactics to score points or goals. These games promote physical fitness while also fostering important values such as teamwork, cooperation, communication, and fair play.

This sub-topic focuses on the two ball games being Football and Netball skills. Both sports demand a blend of individual skill, tactical awareness, and team coordination. Major skills such as dribbling, passing, shooting, catching, and marking form the foundation of effective play in these games. Developing these skills enhances not only personal performance but also overall team success.

Specific Competence 1.9.2.1 Perform skills in Football and Netball games.

Learning environment:

The lesson on Football and Netball can be conducted in a Natural environment (football pitch and netball court). The teacher can also teach the learners from any of the environments such as Artificial (Modified classroom...) and Technological (video clips, shows...).

Teaching/learning material

Official footballs and Netballs, nets, bibs or team jerseys, whistle, goal posts, cones...(locally improvised materials; rolled up clothing or plastics as balls, sticks or stuck stones as goal posts, empty bottles or stones as markers

❖ Learning Activity:

- Performing basic skills in Football and Netball games. (*Dribbling, shooting, catching, passing, marking...*).

Learners should:

Task 1

Discuss and mark the football pitch using the standard dimensions.

Dimensions of a standard football pitch:

Field

- The rectangular playing field may measure from 90m to 120m long and 45m to 90m wide.
- A half way line must be marked out across the field.
- A suitable mark in the center of the field is surrounded by a circle with a radius of 9.15m.

Goal area

- Two lines are drawn at right angles to the goal line, 5.50 m from each goal post. These lines extend into the field for 5.50 m and are joined by a line drawn parallel with the goal-line.

Penalty area

- Two lines are drawn at right angles to the goal-line, 16.50m from each goal post. These lines extend into the field for 16.50 m and are joined by a line drawn parallel with the goal line.
- The penalty spot is drawn 11 m from the centre of the goal-line. Using the penalty spot as the centre, an arc of a circle with a radius of 9.15 m is drawn outside the penalty area.

Corner area

- A quarter circle with a radius of 1 m is drawn from each corner post.

Goal post

- Goal posts are 7.32 m apart and are joined by a horizontal crossbar. The lower edge of which is 2.44 m from the ground.
- Nets are attached to the post, crossbar and the ground behind the goals.

**ACTIVITY****Learners should:****Task 2**

In pairs or groups perform various activities to demonstrate skills like dribbling, shooting and passing.

Dribbling**TIP**

Focus on control, balance, and movement in small spaces.

- Each pair sets up a cone 5–10 meters away.
- One partner dribbles to the cone and back, then hands over the ball to the other.
- Focus on using both feet.

Passing**TIP**

Emphasise accuracy, timing, and proper technique.

- Partners stand 3–5 meters apart and try passing with only one touch
- After each pass, the player moves to a new position.
- This teaches movement off the ball.

Shooting**TIP**

- Maintain proper body posture, aiming, and follow-through.
- One partner passes the ball to the other who takes a shot at the goal/net.
- Switch roles after every shot.

Learners should

DISCUSS

Task 1

Discuss and mark the Netball court using the standard dimensions.

NETBALL

The court

- The court is 30.5m long and 15.25m wide. The longer sides (length) are called **sidelines** and the shorter side (width) is the **goal-line**.
- The court is divided into three equal parts, the centre third and two goal thirds.
- A semicircle with a radius of 4.9m and with its centre in the middle of the goal is drawn in each goal third. This semicircle is called the **goal circle**.
- A circle with a diameter of 90cm marks the centre of the court. This is called the centre circle.

ACTIVITY

Learners should

Task 2.

In pairs or groups perform passing, shooting ... skills in Netball

Passing

TIP

- Accuracy and Teamwork
- Split into groups of 3–5 players.
- Set cones in a line. Players pass the ball down the line using chest passes, shoulder passes, or bounce passes.
- After passing, players move to the back of the line.

Shooting

TIPS

Aiming and Technique

- In small groups, rotate through different shooting spots around the goalpost.
- Each player takes a shot from each cone or mark and collects their ball before rotating.
- Use one hand to guide and the other to support the ball.
- Bend knees slightly and extend arms upwards when releasing.
- Aim just above the ring for a smooth arc.

Expected standards

Skills in Football and Netball games performed correctly.

Sub-Topic: 1.9.3 Board games.

Introduction:

Board games are mentally engaging activities played on a flat surface, requiring strategic thinking, concentration, and careful planning. Unlike physical games, they focus on cognitive skills such as reasoning, memory and patience.

This sub-topic focuses on the basic skills in Chess and Draughts. These two are known for their ability to sharpen the mind and promote decision-making. Both are widely played in schools and competitions, encouraging intellectual growth. These offer fun, challenge, and valuable mental training that benefit learners in and beyond the classroom.

Specific Competence: 1.9.3.1 Perform skills in Chess and Draught.

The lessons on the basic skills of board games can be conducted in a Natural (indoor and outdoor...) and Technological (video clips, computer...) environments

Teaching /learning materials

Standard Chess and draught boards with pieces, chess notation booklets or score sheets, digital chess boards or apps for demonstration. (Locally improvised materials; drawn chess/draught boards on paper, cardboard or wood, bottle caps, curved wood pieces, handwritten sheets for notation practices, chalkboard or white board to illustrate moves and strategies.)

Learning Activities:

- Performing basic skills in Chess and Draught. (*Castling, en passant, basic algebraic notation...*).

Chess

DISCUSS

Learners should:

Task 1

Analyse the chess board and its pieces:

TIPS

- **Chess** is a strategic board game played between two players on an **8×8 checkered board**. Each player begins with **16 pieces**: one king, one queen, two rooks, two bishops, two knights, and eight pawns.
- The aim is to checkmate your opponent's king, putting it in a position where it is under threat and cannot escape capture.

Basic Rules of Play

- The white side always moves first.
- Players take turns, moving one piece at a time.
- Each piece moves in a specific way:

How Chess Pieces Move

King (♔ / ♚):

- Moves one square in any direction: forward, backward, sideways, or diagonally.
- The king is the most important piece-if it is checkmated, the game ends.

Queen (♕ / ♛):

- Moves in any direction (forward, backward, sideways, or diagonally) for any number of squares.
- The queen is the most powerful piece.

Rook/ Castle (♖ / ♜):

- Moves in a **straight line: horizontally or vertically** for any number of squares.
- Two rooks start in each corner of the board.

Bishop (♗ / ♘):

- Moves **diagonally** for any number of squares.
- Each bishop stays on the **same color square** for the entire game.

Knight (♞ / ♟):

- Moves in an **L-shape**: two squares in one direction, then one square at a right angle (or vice versa).
- Knights are the only pieces that can jump over others.

Pawn (♙ / ♚):

- Moves **forward one square**, but **captures diagonally**.
- On its **first move**, a pawn can move forward **two squares**.

**TIP****Special rules for pawns:**

- **Promotion:** When a pawn reaches the far end of the board, it can be promoted to a **queen, rook, bishop, or knight**—most often to a queen.
- **En passant:** A special pawn capture that can happen when an opponent moves a pawn two squares forward from its starting position, and it lands next to your pawn. You may capture it as if it had moved only one square.
- **Blocking:** Pawns cannot move forward if a piece is directly in front of them

**Special Move – Castling**

- Castling is a move involving the king and one of the rooks.
- It allows the king to move two squares toward a rook, and the rook jumps over the king to the next square.

**TIP**

This can only be done if;

- Neither the king nor rook has moved.
- The squares between them are empty
- The king is not in check, nor passes through or ends on a square under attack.

**Basic Algebraic Notation**

- Algebraic notation is the standard system used to record and describe moves.
- Each square on the board has a name (e4, d5...) based on file (a–h) and rank (1–8).

TIP

Pieces are abbreviated as:

- K = King, Q = Queen, R = Rook, B = Bishop, N = Knight, (*no letter for pawns*).
- (Nf3 means “Knight to f3”, e4 means “pawn to e4”...)

ACTIVITY

Learners should

Task 2.

In pairs perform various basic skills in Chess (*castling, en passant, basic algebraic notation ...*).as guided by the teacher.

TIP

The teacher should look for the following as the learners play the game;

Careful thinking.

- Create mini-scenarios where castling or en passant is possible and have them identify and execute the move.

Planning ahead.

- Show simple piece movement in notation, then special moves: (kingside castling), (queenside castling)
- Using each piece wisely.
- Developing strategies to control the board.
- Checkmate the opponent’s king.

Draughts/checkers

DISCUSS

Learners should:

Task 1

Discuss, make and familiarises themselves with the draughts Board

The draughts Board

Be introduced to Draughts and how it is played.**CONTENT TIPS**

- ❑ Draughts, also called Checkers, is a two-player board game that combines strategy, planning, and tactical movement.
- ❑ It is played on a checkered board, typically 8x8 (standard version), using 12 pieces per player, placed on the dark squares of the first three rows.
- ❑ The game is easy to learn but challenging to master.
- ❑ Players move their pieces diagonally across the board with the aim to capture all the opponent's pieces or block them from moving.

How Draughts Pieces Move**Regular Pieces:**

- Move diagonally forward by one square.
- Can capture an opponent's piece by jumping over it diagonally onto an empty square.
- Multiple captures are allowed and must be taken in one turn if available.
- Compulsory capturing: if a player can make a capture, they must do so.

Kings

- A piece becomes a king when it reaches the opposite end of the board.
- Kings can move and capture diagonally in both directions-forward and backward.
- Kings follow the same jumping rules as regular pieces but with more freedom of movement.

Basic Rules of Draughts**Starting the Game:**

- Each player places 12 pieces on the dark squares of the three rows closest to them.
- One player uses dark-colored pieces; the other uses light-colored pieces.
- The player with the dark pieces moves first.

Movement:

- Only dark squares are used.
- Regular pieces move forward diagonally.
- Kings can move forward and backward diagonally.

Capturing:

- A player must capture if possible.
- Multiple jumps are allowed and must be played in a single turn.
- Captures can be made with both regular pieces and kings.

Winning the Game:**A player wins by;**

- Capturing all opponent's pieces.

- Blocking all of the opponent's pieces so they have no legal move.

Draw (Tie):

- A game may end in a draw if neither player can force a win (stalemate or agreement).

ACTIVITY

Learners should:

Task 2

In pairs perform various basic skills in draught.

TIPS

The teacher should look for the following when learners are performing;

- How the pieces move, including capturing and kinging.
- Basic strategies, such as controlling the center, building a prime and creating anchors

Sub-Topic: 1.9.4 Racquet games

Introduction:

Badminton is a dynamic and fast-paced racquet sport played either by two opponents (singles) or two pairs (doubles). The game takes place on a rectangular court divided by a net, where players use lightweight racquet to hit a shuttlecock back and forth. The main objective is to score points by landing the shuttlecock in the opponent's court or causing them to commit a fault.

In addition to being a competitive sport, badminton is a fun and engaging physical activity that improves coordination, agility, reflexes and overall fitness. Whether played for recreation or competition, learning the basic skills is essential for building confidence and competence on the court.

This sub-topic introduces learners to the fundamentals of racquet games like badminton. Learners will learn the basic skills, tactics and strategies required to play each game, as well as the rules and etiquette involved.

Specific Competence(s) 1.9.4.1 Perform skills in Badminton.

TIPS

The lesson on the skills in badminton can be taught in a natural environment (indoor court...), It can also be conducted from any of the environments such as Artificial (Modified Gymnasium...) and Technological (video clips...)

Teaching/learning materials

Racquets, shuttlecock, whistle, net, poles (locally improvised materials; hand-made racquets made of wire, wood, plastic frames with string, shuttlecock made of chicken feathers.

Learning Activity:

- Performing basic skills in Badminton. (*Grip of the racquet, strokes, footwork...*)

**ACTIVITY**

Learners should:

Task 1

- Mark the Badminton court using standard dimensions and discuss the playing equipment.

**CONTENT TIPS****The Badminton Court****The Net**

- The net must be firmly stretched from post to post and must be 76 cm deep. The top of the net must be 1.524 m above the floor at centre and 1.55 m at the goal post.
- It must be edged with a white tape that is 7.5 cm wide and doubled and it must be supported by a cord or cable run through the tape and strained over and flush with the top of the posts.

Posts

- The posts, 1.55 m high, should be sufficiently rigid to support the net under tension. They are placed on the side boundary lines of the court.

**TIPS****Playing equipment****Shuttlecock**

- The shuttle is generally made of 16 feathers fixed to a cork base.
- The weight varies between 4.74 g and 5.50g.

Racquet

- The racquet is usually made of graphite.
- The frame of the racquet, including the handle, may not exceed 68 cm in overall length and 23 cm in overall width.
- The stringed area may not exceed 28 cm in overall length and 22 cm in overall width.

How the game is played

- The doubles game is played by two players to a side, and the singles game by one player to a side.

Scoring

- A match shall consist of best of three games, unless otherwise arranged.
- The side which first scores 21 points shall win a game.
- The side winning a rally shall add a point to its score.
- If the score become 20-all, the side which scores two consecutive points shall win the game.
- If the score become 29-all, the side scoring 30th point shall win the game.
- The side winning a game serves first in the next game.

Learners should

Task 2

Perform the basic skills in Badminton. (grip of the racquet, strokes, footwork...)

CONTENT TIPS

The grips

When the learners are playing the game, the teacher should assess the correctness of the Forehand and Backhand grip

- Hold the shaft of the racquet with your non preferred hand.
- Make sure the face of the racquet is perpendicular to the floor.
- Shake hands with the handle of the racquet.
- Make a “V” formed by the juncture of your thumb and index finger.
- Grasp the handle lightly, with fingers spread slightly.
- When not in the act of stroking the shuttle, the grip should be relaxed and fairly loose.
- Tighten the grip enough to maintain control of the racquet.

Expected standard

Skills in badminton performed correctly.

ASSESSMENT CRITERIA

1. Multiple-choice quizzes
 - Accuracy (correct selection of answers).
 - time management (complete tasks within the given time)
 - understanding of concepts (reflecting knowledge of concepts)
2. Short-answer questions
 - Relevance (answers directly addressing the question)
 - Completeness (include all necessary points and explanations)
 - Accuracy (correct information and use of terminologies.)
3. Essay questions
 - Content and relevance (address the topic with accurate and relevant details)
 - Organization (clear introduction, body and conclusion)
 - Depth of analysis (shows critical thinking and understanding)
 - Examples and support (includes appropriate example and evidence)
 - Language and mechanics (grammar, punctuation, spelling and expression.)
4. Group project, Research and Field trip reports
 - Collaboration and contribution (equal participation, teamwork and communication.)
 - Creativity and initiative (original ideas and thoughtful presentations.)
 - Presentation, if oral (clear, confident and well-coordinated)
5. Class participation and engagement (Debates)
 - Preparation (demonstrate research and readiness)
 - Active participation (engaged, contributes meaningfully)

- Critical thinking (presents logical and relevant arguments)
- Communication skills (speak clearly, listens actively)
- Respect and collaboration (maintains respectful dialogues and good teamwork.)

6. Practical

- Skill execution (performs task with correct technique and form)
- Application of theory (shows understanding of rules)
- Safety and discipline (follows instructions and uses equipment safely)
- Participation and effort (actively involved and shows enthusiasm)
- Progress or improvement (demonstrates learning overtime.)

SUMMARY

- ❑ Athletics, ball games, and racket games comprise a diverse range of sports that cater to various interests and skill levels.
- ❑ Athletics encompasses track and field events, road running, and cross-country running, demanding speed, strength, endurance, and agility.
- ❑ Ball games, including football and netball require hand-eye coordination, speed, and strategy, while racket games like badminton involve hitting a shuttlecock with a racket, necessitating quick reflexes and precise technique.
- ❑ Collectively, these sports offer a platform for physical exercise, social interaction and competitive excellence.

TOPIC 1.10 ANATOMY AND PHYSIOLOGY

INTRODUCTION

Anatomy and Physiology is the study of the human body's structure and function. In Physical Education and Sport, it helps learners understand how the body moves, responds to exercise and how it adapts to physical activity.

This topic aims to introduce learners to the fundamental principles of anatomy and physiology, focusing on their application to physical education and sports. Learners will explore the human body structure and function, laying the groundwork for further study in exercise science and sports performance.

General Competences:

Learners should acquire the following general competences:

Problem solving: The application of knowledge to tackle real life situations using various strategies and providing solutions to challenging situations within the environment.

Critical thinking: The ability to breakdown complex ideas and skills to improve the ability to understand.

Analytical thinking: The capacity to observe, navigate, analyse, design, judge and represent objects whether natural or artificial.

Communication: use appropriate language (verbal and non-verbal) in different situations.

TERMINOLOGY

Appendicular: The part of the skeletal system that includes the upper and the lower limb as well as the bones that connect them to the axial skeleton.

Axial: The part of the skeletal system that forms the central axis of the body

Bone: Hard, calcified tissue

Cartilage: Connective tissue that provide that provides cushioning, support and smooth movement between bones and joints.

Joint: A place where two or more bones join together.

Ligament: Fibrous connective tissue that connects bones or connects bone to bone.

Skeleton: internal framework of the body, composed of all the bones and cartilages that provide support, protection and movement.

Tendon: Fibrous connective tissue that connects muscles to bones.

Sub-Topic: 1.10.1 Human Skeletal System

Introduction

The Skeletal System is a vital part of the human body, providing support, protection and movement. It serves as a foundation of the body's structure and movement, enabling human beings to stand, walk, run and engage in various physical activities.

In this sub-topic, learners will explore the structure and function of the skeletal system, including

bones, joints and ligaments.

Specific Competence(s): 1.10.1.1 Analyse the human skeletal system

Learning Environment:

The teacher can also teach the lesson from any of the environment such as Natural (biology) laboratory ...), Artificial (modified classroom...) and Technological (video clips, shows...)

Teaching/learning material

Charts/posters showing labelled human skeleton, the skeletal model, anatomy text books, projector, white board (locally improvised materials; skeleton made from cardboard, sticks or straws to show body parts, drawn skeleton on manila paper...)

Learners' activity

- Identifying the framework of the human skeletal system and its functions. (*Axial and appendicular skeleton*).

Learners should:

DISCUSS

Task 1

Work in smaller groups to identify and label the framework of the human skeletal system (Axial and Appendicular).

TIPS

Sketch by Abhishek Sharma

LABELED DIAGRAM OF SKELETON

Human skeleton:

- The skeleton has 206 bones, held together by strong fibers called ligaments.

Axial Skeleton:

- Skull (*Cranium and Face Bones*)
- Vertebral Column (*Cervical, Thoracic, Lumbar, Sacrum, Coccyx*)
- Ribcage (*Ribs and Sternum*)

Appendicular Skeleton:

- Pectoral Girdle (*Scapula and Clavicle*)
- Upper Limbs (*Humerus, Radius, Ulna, Carpals, Metacarpals, Phalanges*)
- Pelvic Girdle (*Ilium, Ischium, Pubis*)
- Lower Limbs (*Femur, Patella, Tibia, Fibula, Tarsals, Metatarsals, Phalanges*)

**DISCUSS**

Learners should

Task 2

Work in smaller groups to discuss the functions of the human skeletal system.

**TIP****support**

- The human skeleton forms a framework to support the body and give it shape.

protection

- The human skeleton provides protection to the internal organs, such as the brain (Skull), heart and lungs (ribcage), and spinal cord (vertebral column).

movement

- The human skeleton works with muscles to facilitate moving allowing for locomotion, manipulation and other physical activities.

Blood cells production.

- The bones in the human skeletal system, particularly the pelvis, vertebrae, and ribs, are responsible for producing blood cells. (white, red and platelets)

Storage for essential minerals

- Bones act as a storage of calcium and phosphorus, which are vital for various body functions.
- Bones produce hormones like osteocalcin, which helps regulate calcium levels and energy metabolism.

Learning activity: Identifying the types of joints (*freely moveable, slight moveable,*

immovable joints).

DISCUSS

Learners should

Task 3

Work in groups to identify and examine the types of joints.

TIPS

A joint is a place or position where two or more bones meet. They are divided into three types namely freely moveable (Synovial joint), slight moveable (cartilaginous joint) and immovable (fibrous joint).

Synovial/ freely movable joints

- At a freely moveable joint, the bones can move quite freely.
- These are the majority of joints which allow the greatest amount of movement (*knee joint, elbow joint, shoulder joint, hip joint, finger joint...*)
- At a freely moveable joint, the bones can move quite freely.
- These are the majority of joints which allow the greatest amount of movement (*knee joint, elbow joint, shoulder joint, hip joint, finger joint...*)

Parts of a synovial/ freely movable joint

The joint capsule:

- It holds the bones together and protects the joint. It is an extension of the skin/ Periosteum that covers each bone.

Synovial membrane

- Lines the capsule and oozes a slippery liquid called Synovial fluid.

A Joint cavity:

- This is a small gap between the bones. It is filled with Synovial fluid. This lubricates the joint so that the bones can move more easily.

Cartilage

- This is a connective tissue which acts as a buffer/ shock absorber between the bones and joints.

Ligaments

- This is a connective tissue that joins bones to bones.

Tendon

- This is a strong, fibrous connective tissue that attaches muscles to bones

TIPS

The teacher to emphasise on other types of the joints and their positions in relation to synovial joints

Type of joint	Position of joints	Movement allowed
Ball & Socket joints	Hip Shoulder	Flexion, extension, abduction adduction, rotation, & circumduction
Hinge joint	Knee Elbow joints	Flexion & extension
Saddle Joint	Thumb	Flexion, extension, abduction' adduction & circumduction
Pivot Joint	Joint between atlas and axis (neck). Joint between radius and ulna.	Only rotation
Gliding Joint	Joints between carpals wrist) & - tarsals (ankle)	A little gliding in all directions (No bending/ circular movements.)
Condylloid Joint	Joints between the metacarpals and phalanges	Flexion, extension, abduction' adduction & circumduction

Flexion

- Flexion means bending part of the body. Flexion is nearly always forward.

Extension

- Extension means straightening part of the body to its normal position.

Rotation

- This is a circular movement. Rotation is turning movement around an imaginary line, like a wheel turning on its axis e.g. turning your head.

Circumduction

- This is also a circular movement. In Circumduction, the end of a bone moves in a circle e.g. swinging your arm in a circle when bowling.

Abduction

- Abduction is a sideways movement of a limb, out from the centre line.

Adduction

- Adduction is a sideways movement of a limb, towards and even across the centre line. (Adduction is towards the middle)

Slightly movable cartilaginous joints

- The bones at a slightly movable joint can move only a little.
- They are held together by strong white cords or straps called ligaments and joined by cartilage.
- This is like a fibrous cushion which stops the bones from knocking together. It can squash a little to let them move.
- The joints between most of your vertebrae are slightly moveable. The pads of cartilage between them act as shock absorbers to prevent friction.
- The joints between your ribs and sternum are also slightly moveable. They move a little when you breathe in and out.

Immovable/ Fibrous/ fixed joints

- The bones at a fixed joint cannot move at all.
- They interlock/ overlap, and are held close together by strong by tough fiber e.g. skull bone, & the pelvis

Expected standard: Human skeletal system analyzed correctly.

ASSESSMENT CRITERIA

1. Multiple-choice quizzes
 - Accuracy (correct selection of answers).
 - time management (complete tasks within the given time)
 - understanding of concepts (reflecting knowledge of concepts)
2. Short-answer questions
 - Relevance (answers directly addressing the question)
 - Completeness (include all necessary points and explanations)
 - Accuracy (correct information and use of terminologies.)
3. Essay questions
 - Content and relevance (address the topic with accurate and relevant details)
 - Organization (clear introduction, body and conclusion)
 - Depth of analysis (shows critical thinking and understanding)
 - Examples and support (includes appropriate example and evidence)
 - Language and mechanics (grammar, punctuation, spelling and expression.)
4. Group project, Research and Field trip reports
 - Collaboration and contribution (equal participation, teamwork and communication.)
 - Creativity and initiative (original ideas and thoughtful presentations.)
 - Presentation, if oral (clear, confident and well-coordinated)
5. Class participation and engagement (Debates)
 - Preparation (demonstrate research and readiness)
 - Active participation (engaged, contributes meaningfully)
 - Critical thinking (presents logical and relevant arguments)
 - Communication skills (speak clearly, listens actively)
 - Respect and collaboration (maintains respectful dialogues and good teamwork.
6. Practical
 - Skill execution (performs task with correct technique and form)
 - Application of theory (shows understanding of rules)

SUMMARY

- ❑ Application of the principles of anatomy and physiology helps athletes and coaches to optimize performance, prevent injuries and promote overall health and well-being as well as enhancing recovery and rehabilitation.
- ❑ The skeletal system provides the framework for the human body, allowing for movement, support and protection.
- ❑ The axial and appendicular skeletal work together to provide a wide range of movement and functions. Axial malfunction can lead to serious health problems.
- ❑ The bones of the human body are connected by joints which play different roles in enhancing movements. Their functions are for movement, stability, weight bearing and shock absorption.

TOPIC: 1.11 SPORTS BIOMECHANICS

Introduction

Sports Biomechanics is the study of how the human body moves during sports and exercise. It uses ideas from science and physics to help athletes and coaches/sports teachers understand movements like running, jumping, kicking and throwing.

This knowledge helps improve performance, develop better techniques and prevent injuries. For example, biomechanics can help a footballer kick more accurately or a sprinter take off faster. It also plays an important role in designing sports equipment, such as shoes, balls and uniforms, to match how the body moves. This topic will help learners/athletes acquire proper movements that can help them stay safe, perform better and enjoy an active and healthy lifestyle.

Learners should acquire the following general competencies:

Analytical Thinking: The capability to observe, navigate, analyse, design, judge, and represent objects, whether natural or artificial.

Critical Thinking: The ability to breakdown complex ideas and skills to improve the ability to understand.

Problem Solving: The application of knowledge to tackle real-life issues using various strategies and providing solutions to challenging situations within one's environment.

TERMINOLOGY

Acceleration: Rate of change of velocity.

Centre of mass: A point in an object or system where all of its mass can be considered to be concentrated.

Distance: Total length of the path covered by an object as it moves from one point to another.

Force: Push or Pull that causes an object to change its motion

Friction: Refers to the force that opposes motion between two surfaces that are in contact with each other.

Gravity: The force that pulls objects towards the center of the Earth.

Kinetic friction: The force that opposes motion when an object is already moving.

Mass: Amount of matter contained in an object.

Motion: Change in position of an object over time.

Net force: Also known as the resultant force, a net force is the final force acting on a body once all the other forces acting have been considered.

Scalar quantity: As magnitude only.

Speed: Rate of change of the position of a body

Static friction: The force that prevents an object from moving when it is stationary.

Vector quantity: As magnitude and direction.

Weight: Measure of force exerted on an object by gravity.

Sub-Topic: 1.11.1- Force

Introduction:

Force is a push or pull that can cause an object to start moving, stop, change direction, or alter its speed. It is a fundamental concept that plays a vital role in understanding motion.

This sub-topic explores how force affects linear motion, which is the motion of an object moving in a straight line. While the laws of physics suggest that an object or athlete in motion should continue moving indefinitely in a straight line at a constant speed, this rarely happens in sports. This is because various forces such as gravity, friction, and air resistance are always acting on the moving body. These forces work together to slow down, alter or completely stop motion. By studying force, learners can better understand why athletes and objects don't stay in motion forever and how forces shape movement in sporting activities.

Specific Competence: 1.11.1.1 Illustrate forces in sporting activities.

The lesson on force in sporting activities can be conducted from any of the environment such as Natural (playing grounds...), Artificial (Modified classroom...) and Technology (video clips, show...)

Teaching/ learning materials

Balls, surfaces with different textures, Spring balance, small weights, calculators, stop watch, measuring tape/meter ruler, cones or markers, whistle, (Locally improvised materials; grass, sand, smooth floor, plastic bottles, carpet)...

Learning Activity:

- Demonstrating forces in sporting activities. (*Friction, gravity, weight...*).

Learners should:

Task 1

Work in smaller groups to demonstrate different forces in sporting activities.

Friction

Observe how friction affects movement of the ball on smooth and rough surfaces (track, grass, concrete, ...)

- Roll the same ball across each surface.
- Measure how far the ball travels on each.
- Learners record and compare results.
- Discuss which surface had the most friction and how this relates to sports surfaces

Task 2**Gravity****TIPS**

Appreciate the force of gravity by dropping two balls of different sizes.

- Drop both balls from the same height.
- Observe that they hit the ground at the same time (gravity acts equally).
- Discuss how gravity affects falling in sports

Task 3**Weight****TIP**

Observe how weight affects forces in sporting activities

- Use different ball as weights for lifting or throwing.
- Compare different weights to understand how heavier objects affect force in sports (shot put or weight lifting)
- Discuss how weight affects force.

**TIP**

Teacher to guide learners to perform different activities related to the above types of forces.

Learning activity

- Calculating simple forces in relation to sporting activities. ($F=ma$ /or mg).

**ACTIVITY****Learners should:****Task 1**

Apply the formula $F = ma$ or $W = mg$.

- Measure the weight ($W = mg$) of different sports objects (football, basketball...).
- Calculate the force needed to move them with a given acceleration.
- Discuss how mass and force relate to performance in lifting or throwing?

**TIPS**

The teacher can give different examples on calculations of force

If a player kicks a 0.45 kg ball and it accelerates at 20 m/s², the force applied to the ball is:

$$\begin{aligned} F &= ma \\ &= 0.45 \text{ kg} \times 20 \text{ m/s}^2 \\ &= \underline{9\text{N}} \end{aligned}$$

Expected standard:

Forces in sporting activities illustrated correctly

Sub-Topic: 1.11.2 - Speed**Introduction**

Speed means how fast someone or something moves. In sports, speed helps athletes do things quickly, like running, swimming, or kicking a ball. The faster you move, the better your chance of winning in many games.

In physical education, we study speed using Biomechanics. Biomechanics looks at how the body moves. It helps us understand how muscles, bones and joints work together to make us move faster. For example, a runner uses strong leg muscles and good arm movement to run fast.

This sub-topic explores speed as shown in sports by watching how fast players run, how quickly a ball moves or how fast someone swims. In class, speed can be demonstrated by running short races or rolling a ball and timing it.

Specific Competence 1.11.2.1 - Illustrate speed in Sporting Activities.

**TIPS**

The lesson on speed in sporting activities can be taught from any of the environment such as Natural (playing grounds...), Artificial (Modified classroom...) and Technology (video clips, show...)

Learning activity:

- Demonstrating Speed in sporting activities. (*Moving objects...*).

**ACTIVITY****Learners should****Task 1**

Work in smaller groups and demonstrate speed using moving objects.

**TIPS**

30m sprint test. (Using the playing field and measure the distance.)

- Mark straight path of 30m
- Each learner takes turns to run the distance
- Other group members use the stop watch to record the time taken

TIPS

Learner to record their time data and prepare for speed calculations in the next activity.

Name	Distance(m)	Time (s)	Speed (m/s)
Amina	30	?	?
John	30	?	?

Learning activity

Calculating speed in relation to sporting activities. ($S =$)

ACTIVITY

Learners should

Task 1

Work in smaller groups to Calculate speed using the recorded data in the table below

Name	Distance(m)	Time (s)	Speed (m/s)
Amina	30	5	6
John	30	?	?

- $\text{Speed} = \text{Distance} \div \text{Time}$

Example:, if you run 30 meters in 5 seconds:

$\text{Speed} = 30 \div 5 = 6$ meters per second (m/s)

TIPS

The quantity of distance and time can be calculated using the formula for speed

Expected Standard:

- **Speed** in sporting activities illustrated correctly.

ASSESSMENT CRITERIA

1. Multiple-choice quizzes

- Accuracy (correct selection of answers).
- time management (complete tasks within the given time)
- understanding of concepts (reflecting knowledge of concepts)

2. Short-answer questions

- Relevance (answers directly addressing the question)
- Completeness (include all necessary points and explanations)
- Accuracy (correct information and use of terminologies.)

3. Essay questions

- Content and relevance (address the topic with accurate and relevant details)
- Organization (clear introduction, body and conclusion)
- Depth of analysis (shows critical thinking and understanding)
- Examples and support (includes appropriate example and evidence)
- Language and mechanics (grammar, punctuation, spelling and expression.)

4. Group project, Research and Field trip reports

- Collaboration and contribution (equal participation, teamwork and communication.)
- Creativity and initiative (original ideas and thoughtful presentations.)
- Presentation, if oral (clear, confident and well-coordinated)

5. Practical

- Skill execution (performs task with correct technique and form)
- Application of calculations using correct formulae
- Correct application of measurements

SUMMARY

- ☐ In sports, biomechanics plays a vital role in understanding human movement and exercise.
- ☐ By analysing forces, speed and motion, learners, teachers and practitioners can optimise performance, prevent injuries and design effective rehabilitation programs.
- ☐ In sports, forces help athletes move, stop, jump, and throw.
- ☐ Speed means how fast someone or something is moving. It is important in activities like running, swimming, and cycling.

TOPIC 1.12 ENTREPRENEURSHIP IN SPORTS

Introduction:

Entrepreneurship in sports is about using business ideas to create value in the world of sports. It brings together the love for sports and the skills to start and grow businesses. Sports entrepreneurs can be involved in many areas, such as organizing sports events, selling sportswear, running gyms, or creating new sports apps.

It plays important roles in the sports industry by providing services, creating jobs and helping athletes and fans enjoy sports more. Successful sports entrepreneurs also use financial skills to manage money well and build strong business portfolios.

The sports industry has many sectors where entrepreneurs can work. These include professional teams, sports media, sports equipment, nutrition, fitness and even sports technology. By understanding these sectors and learning business skills, learners can discover exciting opportunities to become future sports entrepreneurs.

Learners should acquire the following general competencies:

Creativity and Innovation: Apply knowledge and skills in new and creative ways.

Express one's idea in a logical manner. Show curiosity about the learning area. Ability to perform skills aesthetically.

Financial Literacy: Set and implement financial goals. Understand basic concepts of sources of income, saving, budgeting, profit and loss. State the benefits of investing. Evaluate different investment opportunities.

Communication: Use appropriate language (verbal and non-verbal) in different situations.

Express oneself using different symbols and media. Express oneself (spoken and written) clearly and effectively. Give and ask for positive feedback. Appreciate constructive criticism.

Problem-Solving: Use knowledge gained in solving one's problems in real life situations using different strategies. Provide solutions to challenging situations within their environment. Use pictorial skills to demonstrate basic and complex activities.

TERMINOLOGY

Branding: Creating and promoting a unique identity for a business or product.

Business Model: A plan for generating revenue and sustaining a business

Event management: Planning and executing sports events, such as tournaments or games.

Innovation: Introducing new or improved products, services, or processes to the sports industry.

Investment: Funding providing to support a business or project.

Marketing Strategy: A plan for promoting a business or product.

Revenue Streams: Sources of income such as sponsorship, ticket sales or merchandise.

Sponsorship: A partnership between a business and a sports team or event, often involving financial support.

Sports Entrepreneurship: The application of entrepreneurial principles and practices to the sports industry.

Sports media: Using social media platforms to promote a business or product.

Sports Technology: The use of technology to improve sports.

Target Market: A specific group of consumers targeted by a business or product.

Sub-Topic: 1.12.1- Sports Entrepreneurship

Introduction:

Sports Entrepreneurship involves creating and managing businesses that cater various aspects of the sports industry. This includes ventures such as Sports Academies, Goods Production, Sports Media, Event Management, Sports Technology, and Fitness Centers. Entrepreneurs in sports bring innovation and interest to the sports industry, identifying gaps and developing new products or services that enhance the sports experience for athletes, fans and stakeholders.

Specific Competence: - 1.12.1.1 Analyse entrepreneurship and its roles in the sports industry.

The lesson on entrepreneurship in sports can be taught from any of the environment such as Natural (classroom...), Artificial (computer labs...) and Technology (video clips, show...)

Teaching /learning materials

Computers, video clips, calculators, charts, graphs, posters, Markers (Locally Materials Improvised Old sports shoes, jerseys, or equipment, hand-drawn diagrams or posters made by learners skipping ropes, weights with bottles...)...

Learning Activity:

Discussing sports entrepreneurship.

Learners should

DISCUSS

Task 1

Work in groups to discuss sports entrepreneurship.

TIP

Each group is assigned one type of sports business to discuss the business's purpose and who benefits.

- Sports academy
- Fitness center
- Sports media

- Event management
- Sports technology
- Sports equipment

**TIP****Sports Academy****Purpose:**

- To train and develop athletes in specific sports through structured programs and coaching.

Benefits:

- Young athletes, schools, professional clubs, communities

Fitness Center**Purpose:**

- To promote general physical health, fitness, and well-being for the public and athletes.

Who Benefits:

- General public, athletes, fitness enthusiasts, people with health goals

Sports Media**Purpose:**

- To inform, entertain, and engage fans through coverage and promotion of sports events and personalities.

Who Benefits:

- Fans, athletes, clubs, advertisers, and sponsors.

**TIP**

Teachers to guide on the purpose and who benefits for the other business ventures.

Learning Activity:

Analysing the roles of entrepreneurship in the sports industry. (*Financial literacy, business portfolio...*).

**DISCUSS****Learners should**

Debate on the roles of entrepreneurship in sports industry.

**TIP****Task 1****Debate motions**

- Financial literacy is the most important skill for a sports entrepreneur.
- Sports entrepreneurs should focus on building a diverse business portfolio for long-term success.

- Sports businesses should prioritize profitability over social impact.
- Financial planning and budgeting are more important than business innovation in sports entrepreneurship.
- Sponsorship and external funding are more important than financial literacy for sports entrepreneurs.

TIP

Financial literacy is the most important skill for a sports entrepreneur.

Affirmative Side (Supporting the motion):

- Financial literacy helps sports entrepreneurs make informed decisions about budgeting, investments, and managing cash flow.
- It ensures that sports businesses are sustainable and can weather economic downturns.
- Without financial understanding, a sports entrepreneur may struggle to make strategic decisions or maximize profits, which can lead to business failure.
- Example: A sports academy without proper financial management might fail to maintain training equipment or pay its staff on time.

Negative Side (Opposing the motion):

- While financial literacy is important, entrepreneurship also requires creativity, leadership, and market understanding.
- Successful entrepreneurs must have a vision for their business, which requires strategic planning, innovation, and the ability to adapt to changes in the sports industry.
- Example: A sports media startup may thrive due to its innovative content, even if the financial management isn't perfect, as long as they have strong customer engagement.

Sports entrepreneurs should focus on building a diverse business portfolio for long-term success.

Affirmative Side (Supporting the motion):

- A diverse business portfolio allows sports entrepreneurs to reduce risk by spreading investments across multiple revenue streams (e.g., merchandise, event management, media rights, and sponsorship).
- Having multiple income sources can protect the business if one sector (e.g., ticket sales) declines due to external factors like economic crises or pandemics.
- Example: A sports team owner who invests in both a professional team and a sports equipment brand can generate income even if the team faces a poor season.

Negative Side (Opposing the motion):

- Focusing on one niche within the sports industry can lead to more focused expertise, which is critical for a business's success.
- Spreading resources too thin across many sectors can dilute the effectiveness and quality of each business venture.
- Example: A sports startup focused only on developing high-quality sports apparel might grow more successfully than one trying to do too much, such as managing events or running a gym.

Sports businesses should prioritize profitability over social impact."

Affirmative Side (Supporting the motion):

- Profitability is essential for the survival and growth of any business, including sports businesses. Without strong profit margins, a sports entrepreneur cannot reinvest into the business or grow it further.
- In the competitive sports industry, financial sustainability ensures that the business can sponsor athletes, create new products, and provide better services.
- Example: A sports equipment company needs to ensure it's profitable in order to reinvest in innovative technology, like better safety equipment for athletes.

Negative Side (Opposing the motion):

- Businesses that focus solely on profitability may neglect their social responsibilities, which can harm their reputation and long-term sustainability.
- A social impact focus can build trust with customers, foster brand loyalty, and even open up new revenue streams (e.g., social enterprises or sustainable products).
- Example: A fitness center that offers affordable memberships to low-income communities could generate positive publicity and long-term success, even if it sacrifices some initial profits.

**TIP**

The teacher to provide learners with guiding points on other debate motions.

Expected standard

Entrepreneurship roles in sports analysed correctly.

Sub-Topic: 1.12.1- Sports Industry:**Introduction:**

The sports industry is made up of many different parts that work together to make sports exciting and important. These include professional sports teams, sports media, sports equipment and sports nutrition. Each part plays a big role in helping athletes perform well and giving learners something to enjoy.

Professional sports teams compete at the highest level, while sports media helps share these events with the world. Sports equipment helps athletes perform at their best, and sports nutrition helps them stay healthy and strong. All these sectors are connected and help make the sports world what it is today.

Specific Competence: Exhibit knowledge of sectors in sports industry.

Learning environment:

The lesson on sectors in sports industry can be conducted from any of the environment such as Natural (classroom...) and Technology (video clips, show...)

Teaching and learning materials

Charts. Flash card, handouts, video clips...

Learning Activities:

- Discussing various sectors within the sports industry. (*Professional sports teams, sports media, sports equipment, sports Nutrition...*).

DISCUSS

Learners should

Task 1:

Work in smaller groups to discuss various sectors in the sports industry.

CONTENT TIPS

Sectors in the sports industry

- Sports Media
- Sports Equipment
- Sports Nutrition
- Professional Sports Teams...

Sports Media

Roles

- Advertising
- Subscriptions
- Broadcasting rights.

Who benefits

- The general public
- Athletes
- Coaches

Sports nutrition

Roles

- Provide balanced diet to athletes
- protein supplements,
- energy drinks

Who benefits

- Coaches
- Fans
- Athletes
- Media

TIP

The teacher to provide learners with guiding points on other Sectors within the Sports Industry

Expected Standard

Knowledge of Sectors within the Sports Industry exhibited accordingly.

ASSESSMENT CRITERIA

1. Multiple-choice quizzes

- Accuracy (correct selection of answers).
- time management (complete tasks within the given time)
- understanding of concepts (reflecting knowledge of concepts)

2. Short-answer questions

- Relevance (answers directly addressing the question)
- Completeness (include all necessary points and explanations)
- Accuracy (correct information and use of terminologies.)

3. Essay questions

- Content and relevance (address the topic with accurate and relevant details)
- Organization (clear introduction, body and conclusion)
- Depth of analysis (shows critical thinking and understanding)
- Examples and support (includes appropriate example and evidence)
- Language and mechanics (grammar, punctuation, spelling and expression.)

4. Group project, Research and Field trip reports

- Collaboration and contribution (equal participation, teamwork and communication.)
- Creativity and initiative (original ideas and thoughtful presentations.)
- Presentation, if oral (clear, confident and well-coordinated)

SUMMARY

- ☐ Entrepreneurship within the sports industry plays an important role in fostering innovation and economic growth
- ☐ Entrepreneurs in this sector influence their creativity and business acumen to introduce new products, services, and experiences that enhance the sports network.
- ☐ From developing cutting-edge sports equipment and technology to founding fitness centers and sports academies, they address the different needs of athletes, fans, and other stakeholders.
- ☐ Sports entrepreneurs also capitalise on marketing, media, and event management opportunities, creating compelling content and organising major events that drive fan engagement and revenue.
- ☐ Various sectors within the sports industry offer abundant entrepreneurial opportunities. These include sports equipment manufacturing, sports medicine, fitness and wellness, sports media and broadcasting, e-sports, and sports tourism.

SAMPLE LESSON PLAN**SCHOOL:** Waida Secondary School**DATE:** 05/05/2025**NAME OF TEACHER:** John James**TIME:** 07:30 – 09:50**LEVEL:** Form 1M**DURATION:** 80 Mins**TOTAL ENROLMENT:** BOY: 25 GIRLS: 28**TOTAL ATTENDANCE:** BOYS:24 GIRLS: 28**SUBJECT:** Physical Education and Sports**TOPIC:** 1.5 Physical Fitness**SUB-TOPIC:** 1.5.1 Health related components.**GENERAL COMPETENCES:**

- i. Collaboration
- ii. Communication
- iii. Creativity and innovation
- iv. Problem solving
- v. Analytical thinking
- vi. Emotional intelligence

SPECIFIC COMPETENCES: 1.5.1.1 Perform health related activities.**RATIONALE:**

This lesson will help learners to develop physical fitness, coordination and focus which are essential for both athletic performance and personal growth. It is number one (1) of the three (3) lessons in the learning activities.

PRIOR KNOWLEDGE:

Learners have been involved in various sporting activities or games that demand the use of muscular strength, cardiovascular endurance, flexibility, muscular endurance and body composition (cycling, skipping, lifting objects ...)

REFERENCES:

- PES Teaching module Term 2, Page ...
- PES Syllabus, page 4 –
- Advanced Studies in Physical Education and Sport, page 80 - 109

LEARNING ENVIRONMENT:

- Natural environment (classroom ...)
- Artificial environment (modified room ...)
- Technological environment (video clips, ...)

TEACHING AND LEARNING MATERIALS/RESOURCES:

- Video clips, pictures, charts, whiteboard...

EXPECTED STANDARD: *To be indicated upon successful execution of all the components outlined under health-related activities.*

LESSON PROGRESSION:

STAGES	TEACHER'S ACTIVITY	LEARNERS' ACTIVITY	FORMATION	ASSESSMENT CRITERIA
INTRODUCTION 5mins	Introduces the lesson by asking learners on health-related fitness	Answering questions based on their experience.		● Observe learner engagement and participation
LESSON DEVELOPMENT 30mins	● Provides a video clip or displays pictures depicting various sporting activities. ● Divides the class into smaller groups and assigns tasks.	● watching a video or displayed pictures depicting various sporting activities, athletes using components of health-related fitness. ● ● In groups, identifying health related fitness activities in relation to what they observed from the video clip or pictures.	Semi – circle Small groups	● Assessing learners' ability to identify and discuss health related fitness
	● Guides the learners as they discuss the components of health-related fitness. (<i>muscular strength, cardiovascular endurance, flexibility ...</i>)	● Discussing the components of health-related fitness in relation to their definitions.	Small groups	● Assess learners' ability to contribute points in line with health-related fitness.

EXERCISE / APPLICATION 30mins	● Guides learners in their presentations.	● Making presentations arising from their discussions in groups.	Plenary session	● Learners present logical arguments and counter arguments effectively.
CONCLUSION 15mins	● Summarises key learning points	Learners summarise key take-aways from the lesson and share personal reflections.		Learners articulate their understanding on the key concepts

HOMEWORK:

Observe different activities being performed by people around you. Analyse how each component of health-related fitness is being utilised. Thereafter, write its benefits to the user in relation to their physical, mental and social health.

LESSON EVALUATION:

Lesson was successfully taught. Learners were able to identify and discuss health-related fitness using available teaching/learning materials such as video clips, charts The methods used in the lesson were group discussion, question and answer, individual work which stimulated active participation. However, some learners needed support on identifying different health-related fitness hence homework was given.
